### QUESTION 1

Which two of the following are benefits of the Palo Alto Networks Zero Trust architecture? (Choose two.)

Select 2 Correct Responses

- A. tighter access control
- B. increased detection of threats and infiltration
- C. more network segments
- D. cloud-based virtual private network (VPN)

Correct Answer: AB

---

### QUESTION 2

A customer has enabled the Threat Prevention subscription on their Palo Alto Networks Next-Generation Firewall.

How will the performance of the firewall be affected if the customer also enables both WildFire and User-ID?

- A. The maximum throughput performance will be reduced, but the impact will vary based on the firewall model being used.
- B. Enabling User-ID will have no additional performance impact, but enabling WildFire will reduce throughput.
- C. There will be no additional performance impact to the firewall, and throughput will remain the same, regardless of firewall model.
- D. Enabling WildFire will have no additional performance impact, but enabling User-ID will reduce throughput.

Correct Answer: C

---

### QUESTION 3

In which two of the following scenarios is personal data excluded from protection under the General Data Protection Regulation (GDPR)?

Select 2 Correct Responses

- A. The data was automated as part of an information filing system.
- B. The data was generated in the course of a purely personal or household activity.
- C. The data will be used for the prevention of criminal offenses.
- D. The data is related to a person's economic or cultural identity.

Correct Answer: AC

---

#### QUESTION 4

Using a comprehensive range of natively-integrated subscriptions and inline machine learning (ML), what does a Next-Generation Firewall (NGFW) use to prevent known and unknown threats in real time?

- A. Cloud Delivered Security Services (CDSS)
- B. Cloud Security Posture Management (CSPM)
- C. Cloud Native Security Platform (CNSP)
- D. Cloud Identity Access Management (CIAM)

Correct Answer: A

---

#### QUESTION 5

How does Cloud Identity Engine (CIE) simplify deployment of cloud-based services to provide user authentication?

- A. It allows configuration of an authentication source once instead of for each authentication method.
- B. It expands the capability to filter and forward decrypted and non-decrypted Transport Layer Security (TLS) traffic.
- C. It ensures that a compromised master key does not compromise the configuration encryption for an entire deployment.
- D. It authenticates users via a cloud-based service and refers to the hub for mappings for group identification.

Correct Answer: D
