QUESTION 1

A database administrator (DBA) is complaining of slow write performance to a storage array. The DBA would like to have access to real-time performance reporting of the storage array to correlate array performance with database performance.

Following SNIA Storage Security Best Current Practices, what should you do while limiting administrative complexity?

- A. Create a generic administrative ID with limited administrative rights to the storage array and provide it to all members of your organization's DBA team for performance troubleshooting.
- B. Create a read-only view of performance graphs for the LUNs presented to database hosts and add the DBAs user ID access.
- C. Create a nested administrative sub-group that has access to all performance data and
- D. administrative settings for the LUNs presented to database hosts and add the DBAs user ID to the nested sub-group.
- E. Create a nested administrative sub-group that has access to all performance data and
- F. administrative settings for the LUNs presented to database hosts and add the DBA team's user group to the nested sub-group.

Correct Answer: B

QUESTION 2

Which two cloud deployment models address data privacy issues? (Choose two.)

- A. Community
- B. Public
- C. Private
- D. Hybrid
- E. Campus

Correct Answer: CD

QUESTION 3

A company has a storage subsystem that supports a variety of replication options. They have purchased an identical array and placed it at a secondary site 4,200 km away and want to keep the two arrays as closely synchronized as possible.

Which solution should be chosen?

- A. Asynchronous replication is the only replication option for distances of this length.

- B. Synchronous replication is the only replication option for distances over 4,000 km.
- C. Snapshots allow for data to be quickly captured, copied, and mounted from one storage array to another and is the ideal solution for all distances.
- D. Synchronous replication will keep the arrays in the closest sync and is ideal for short distances such as 4,200 km.

Correct Answer: A

QUESTION 4

A security audit reveals deficiencies in your company's FC zoning practices. Your manager asks you to make a recommendation to implement the most secure FC zoning possible. Your company is using switches from a single vendor.

What do you recommend?

- A. All zones should use frame-based hardware enforcement using pWWN identification exclusively for all configurations.
- B. All zones should use software-based enforcement using pWWN identification exclusively for all configurations.
- C. All zones should use frame-based hardware enforcement using destination port identification exclusively for all configurations.
- D. All zones should use software-based enforcement using destination port identification exclusively for all configurations.

Correct Answer: A

QUESTION 5

When troubleshooting an issue on a host, you discover that the existing file system partition has been corrupted after you provisioned a LUN to another host connected to the same FC fabric.

What is the cause of this problem?

- A. Incorrect zoning
- B. Incorrect LUN masking
- C. Incorrect multipathing policy
- D. Incorrect LUN size

Correct Answer: B
