QUESTION 1

Which of the following statements are true?

- A. The application of the Rules Centralization pattern centralizes the governance of business rules so that they can be modified and evolved from a single location.
- B. The application of the Rules Centralization pattern reduces redundancy by centralizing common business rules-related logic that would normally be distributed across multiple services.
- C. The application of the Rules Centralization pattern results in centralized business rules that can be applied at runtime.
- D. The application of the Rules Centralization pattern can lead to a decrease in autonomy because it can introduce the need for an additional service to be part of service compositions.

Correct Answer: A

QUESTION 2

In the message exchange framework established by the application of the Reliable Messaging pattern, what roles are typically fulfilled by service agents?

- A. service agents can process positive acknowledgements
- B. service agents can process negative acknowledgements
- C. service agents can load balance messages
- D. service agents can route messages based on their content

Correct Answer: AB

QUESTION 3

A service composition architecture with the following requirements needs to be created:

1.
Services will have different periods of availability.
 2.
Sometimes the destination of a message cannot be determined until runtime.
 3.
All the services do not support the same messaging protocol. Of the following choices, which patterns should be used to address these requirements?
- A. Event-Driven Messaging, Intermediate Routing, Atomic Service Transaction

- B. Protocol Bridging, Compensating Service Transaction, Asynchronous Queuing
- C. Intermediate Routing, Data Format Transformation, Asynchronous Queuing
- D. Protocol Bridging, Intermediate Routing, Asynchronous Queuing

Correct Answer: D

QUESTION 4

Which of the following statements is true?

- A. A compensating service transaction always exists within the scope of an atomic service transaction.
- B. The application of the Compensating Service Transaction pattern relies heavily upon an underlying database that supports the rollback of changes.
- C. A compensating service transaction is only used in situations where the rollback of changes across services needs to be guaranteed.
- D. None of these statements are true.

Correct Answer: D

QUESTION 5

Which of the following statements is true?

- A. The Legacy Wrapper pattern should not be applied in conjunction with the Process Centralization pattern because legacy systems do not possess enough autonomy to be effectively composed.
- B. The Messaging Metadata pattern can be applied to supplement messages with metadata that can be used for tracking purposes when also applying the Reliable Messaging pattern.
- C. The Protocol Bridging pattern is often used with the Legacy Wrapper pattern as a means of performing data model transformation between service inventory-wide data models created through the application of the Schema Centralization pattern and the underlying proprietary legacy format.
- D. All of these statements are true.

Correct Answer: B
