QUESTION 1

Which statement is true regarding VFS?

- A. VFS is a set of ANs designed for BtrFS to provide portability.
- B. VFS is a high-performance journaling file system format used by default by YaST and parted.
- C. VFS is an abstraction layer in the kernel that provides the same interface to applications and the user, regardless of which file system format is used.
- D. VFS is a translation layer to allow applications written for ext2 and ReiserFS to run on ext4 file systems.
- E. VFS is a translation layer to allow applications to run on mobile platforms.

Correct Answer: B

QUESTION 2

If the file1.txt file already exists in your home directory, what will the touch -7file1.txt command do if anything?

- A. This command displays a message that file1.txt is a normal file.
- B. This changes the access and modification times of the existing file1.txt file.
- C. This will delete the existing file1.txt file and create a new zero byte file using the same name.
- D. This generates an error since file1.txt already exists.
- E. This causes any additional data to be appended to the existing file1.txt file.
- F. This command displays a message that file1.txt is a normal file and displays the size of the file.

Correct Answer: C
