QUESTION 1

The Finance team at Universal Containers usually does not need access to Account and Contract records. A user is given Opportunity access for a big deal to help with tax calculation. She can now also access Account and Contract records.

Which two reasons could be causing this issue? Choose 2 answers

- A. Contact records can be accessed due to implicit sharing from Account.
- B. Account records can be accessed due to implicit sharing from Opportunity.
- C. Contact records can be accessed due to implicit sharing from Opportunity.
- D. Account records can be accessed due to role hierarchy.

Correct Answer: AB

QUESTION 2

Universal Computers (UC) is looking to expand its delivery capabilities through a network of distributors that use a Partner Community license. UC employees currently can view all delivery records through the organization-wide default (OWD) setting of Public Read Only.

Which approach would an architect recommend to limit the records a distributor can see?

- A. Create an ownership-based sharing rule to grant access to the distributor.
- B. Remove Read permission from the distributor profile.
- C. Set the External OWD to Private for the Delivery object.
- D. Create a criteria-based sharing rule to grant access to the distributor

Correct Answer: C

QUESTION 3

Universal Containers has a junction object called "Job Production Facility", with 2 master-detail relationships to the Job and Production Facility custom objects. Both master records have a private sharing model.

What statement is true if a user's profile allows access (Create/Read) to the Job, but no access to the Production Facility Object?

- A. The user will be granted read access to the Production Facility record
- B. The user will see the junction object and the link to the Production Facility.
- C. The user will see the junction object but not the link to the Production Facility.
- D. The user will not be able to see the junction object records or the field values.

Correct Answer: D

QUESTION 4

Universal Containers has a set of Account Management users that should only see Accounts once the Account becomes a customer. The Type field on the Account identifies whether the Account is a Prospect, Customer, Partner or Other.

Which two methods could an Architect use to enable this sharing requirement, assuming a private sharing model for Accounts? Choose 2 answers.

- A. Institute a process that calls for the Account Manager to be added to the Account Team once the Account becomes a customer.
- B. Create an Account Sharing Rule that shares all Accounts owned by Sales to be shared with Account Management roles and subordinates.
- C. Create a Public List View, where Accounts of Type Customer are included and share the List view with the Account Management public group.
- D. Create a Criteria-based Sharing rule that shares the Account to the Account Management Group when the Type is Customer.

Correct Answer: AD

QUESTION 5

Universal Containers has a strict security model enforced through object, field, and row- based security mechanisms. The Architect would like to ensure the security model is being thoroughly tested using Apex automated tests. Which three considerations should be made when using the runAs() method to design Apex unit tests?

- A. runAs() does not enforce user permissions or field-level permissions in test classes
- B. runAs() can be used inside of test classes to validate record-level security
- C. runAs() can be used inside of test classes to validate field-level permissions
- D. runAs() can be used outside of test classes to bypass record-level security
- E. runAs () counts towards total DML statements issued within transaction

Correct Answer: ABE
