Correct Answer: A

---

#### QUESTION 5

Universal Container has a set of Account management users that should only see accounts once the account becomes a customer. The type field on the Account identifies whether the account is a prospect, customer, partner, or other. Which two methods could an Architect use to enable this sharing requirement, assuming a private sharing model for accounts? Choose two:

- A. Create a public list view, where accounts of type customer are included and share the list view with account management public group
- B. Institute a business process that calls for the account manager to be added to the account team once the account becomes a customer
- C. Create an account sharing rule that shares all accounts owned by sales to be shared with account management roles and subordinates
- D. Create a criteria-based sharing rule that shares the account to the account management group when the type is customer

Correct Answer: BD
