QUESTION 1

Universal Containers (UC) has requirement to expose a web service to their business partners. The web service will be used to allow each business partner to query UC\'s Salesforce instance to retrieve the status of orders.

The business partner should only be allowed access to orders for which the business partner is the fulfillment vendor. The Architect does not want the business partners to utilize the standard APIs and would prefer a custom API be developed. Which three design elements should the Architect consider in order to ensure the data security of the solution?

Choose 3 answers.

A. Develop a custom Apex web service using the "With sharing" keyword.

B. Provide each partner with their own Salesforce login set to PRI Enabled on the profile.

C. Develop a custom apex web service with a fulfillment ID input attribute.

D. Query the Orders object with Dynamic SOQL based upon the fulfillment ID.

E. Set the Orders object\'s sharing settings of Private in the Org-Wide Defaults.

Correct Answer: ACE

QUESTION 2

Universal Containers has a set of Account Management users that should only see Accounts once the Account becomes a customer. The Type field on the Account identifies whether the Account is a Prospect, Customer, Partner or Other. Which two methods could an Architect use to enable this sharing requirement, assuming a private sharing model for Accounts? Choose 2 answers.

A. Institute a process that calls for the Account Manager to be added to the Account Team once the Account becomes a customer.

B. Create an Account Sharing Rule that shares all Accounts owned by Sales to be shared with Account Management roles and subordinates.

C. Create a Public List View, where Accounts of Type Customer are included and share the List view with the Account Management public group.

D. Create a Criteria-based Sharing rule that shares the Account to the Account Management Group when the Type is Customer.

Correct Answer: AD

QUESTION 3

Which two are potential vulnerabilities in the following code snippet? public class SOQLController { public String name { get { return name;} set {name=value;} } public PageReference query() { String qryString=\\'SELECT Id FROM Contact

WHERE \\'+ \\'(IsDeleted = false and Name like \\\'%\\' + name + \\'%\\\'}\\'; queryResult = Database.query(qryString);
retunr null; } } Choose 2 answers

A. FLS check

B. SOQL Injection

C. Data Access Control

D. Arbitrary Redirects

Correct Answer: BC

QUESTION 4

Universal containers (UC) implemented a private organization-wide default for the Container and Case

objects.

How can UC give support representatives access to Container and Case records owned by Customer

Community users?

A. Create an ownership-based sharing rule that gives access to the head of support role and internal subordinates

B. Create a criteria-based sharing rule that gives access to the head of support role and internal subordinates

C. Support representatives nil automatically get access to these records via the role hierarchy

D. Create a Share Group based on the sharing set created for the Customer Community User Profile.

Correct Answer: D

QUESTION 5

Which three areas should the Architect review in order to increase performance of "Record Access" and "Sharing"
calculations?

Choose 3 answers.

A. Custom Object data, to ensure that no Account has more than 10,000 Custom Objects that look up to it.

B. Opportunity data, to ensure that no Account has more than 10,000 Opportunity records that are related to it.

C. Record ownership, to ensure that no user owns more than 10,000 Object records in the system.

D. Apex Managed Sharing triggers, to ensure that no trigger is querying more that 10,000 Object records.

Correct Answer: ABC
