### QUESTION 1

A developer creates a process using a State Machine. What section(s) does the Final State activity contain?

- A. Entry and Exit
- B. Entry
- C. Exit
- D. Entry, Exit and Transition(s)

Correct Answer: B

The State activity contains three sections, Entry, Exit and Transition(s), while the Final State only contains one section, Entry.

---

### QUESTION 2

A developer creates an automation solution that processes a specific file stored in a Shared location. A developer uses Add Log Fields activity to add a field that indicates which file is being processed during each run. Which name of the field would cause the logging process to become corrupted?

- A. nameOfTheFile
- B. fileName
- C. processedFile
- D. file

Correct Answer: B

Creating custom log fields that have the same name as a default log field causes the logging process to become corrupted and may cause issues in the workflow you are running. For example, creating a custom log field called fileName causes this issue, as fileName is a log field that is generated by default.

#### Default fields

These log fields are present in all execution type logs, such as SQL (if configured), Elasticsearch (if configured), and the default EventViewer Logs:

Message-The log message.

Level-Defines the log severity.

Timestamp-The exact date and time the action was performed. FileName-The name of the .xaml file being executed.

jobId-The key of the job running the process.

processName-The name of the process that triggered the logging. processVersion-The version number of the process.

windowsIdentity-The name of the user that performed the action that was logged. robotName-The name of the robot (as

defined in Orchestrator).

---

### QUESTION 3

A developer creates a Dispatcher process which extracts information from a Microsoft Excel file and uploads that information into an Orchestrator queue. Based on best practice, what is the recommended way to avoid creating duplicate Queue Items?

- A. Enable the Enforce unique references field of the queue Add a descriptive "Reference" in the Add Queue Item activity
- B. Add a descriptive "Reference" in the Add Queue Item activity Ensure that the "Reference" does not equal the "Reference" of the Queue Item last loaded
- C. Create an Excel file of processed Queue Items Loop through the list to check if the current Queue Item to upload has been uploaded before
- D. Disable the Enforce unique references field of the queue Enable the "Auto Retry" of the queue

Correct Answer: A

---

### QUESTION 4

A developer used
