QUESTION 1

A customer needs a datastore to be seen across multiple vSphere clusters with applications inside of the virtual machines that must detect the physical characteristics of the storage device.

Which type of virtual disk meets this requirement?

- A. A virtual disk on a VMFS datastore
- B. A raw device mapped disk in virtual compatibility mode
- C. A raw device mapped disk in physical compatibility mode
- D. A virtual disk on an NFS datastore

Correct Answer: C

QUESTION 2

An administrator is attempting to use Update Manager to patch a cluster of ESXi 5.x hosts. The administrator needs to stage the patches for a scheduled update after hours. When verifying the hosts after the scheduled upgrade, the administrator determines that one of the hosts was not remediated and patches are not staged. The host is using PXE as its boot method.

What condition would cause this behavior?

- A. The host was rebooted prior to the scheduled remediation.
- B. Remediating PXE-booted hosts using Update Manager is unsupported.
- C. The user account used does NOT have the Remediate Hosts privilege.
- D. The RAMdisk on the host has insufficient capacity.

Correct Answer: A

QUESTION 3

While troubleshooting a crash event on an ESXi 5.x host, an administrator determines the log files related to the event are not present.

Which action should the administrator take to resolve the logging issue?

- A. Increase the amount of memory committed to log storage.
- B. Increase the statistic data collection level to 4.
- C. Change the roll-up type to maximum.
- D. Create a persistent scratch location.

Correct Answer: D

QUESTION 4

An application was packaged using ThinApp and access is restricted to an Active Directory group called Customer Services. An administrator needs to remove this restriction.

What should the administrator do to remove this restriction with the least effort?

- A. Repackage the application, selecting Everyone from the Setup Capture wizard.
- B. Remove the PermittedGroups section from package.ini and execute build.bat.
- C. Change PermittedGroups=1 to 0 within package.ini and execute sbmerge.exe.
- D. Change PermittedGroups=0 to 1 within package.ini and execute sbmerge.exe.

Correct Answer: B

QUESTION 5

As part of a multisite Single Sign-On (SSO) deployment what two steps are required to ensure that a change to one Single Sign-On instance is propagated to the other instances? (Choose two.)

- A. Schedule a Replication Task on the primary instance
- B. Select the first instance during the installation of subsequent instances
- C. During the installation of each instance choose Linked-Mode
- D. Enable Synchronize to Active Directory on each instance

Correct Answer: AC
