## QUESTION 1

Veritas Cluster Server supports the Intelligent Monitoring Framework (IMF) which assists clustered environments by reducing polling overhead and failure detected times. Which two agents are IMF aware? (Select two.)

A. DiskGroup

B. NFS

C. DNS

D. IP

E. Process

Correct Answer: AD

## QUESTION 2

An administrator wants to place an existing application under high availability control. Which requirement must be met to place the application under high availability control?

A. The application must have defined start, stop, and monitor procedures.

B. The application must have an unlimited license model.

C. The application must have an enterprise agent available on SORT.

D. The application must run in kernel space.

Correct Answer: A

## QUESTION 3

Refer to the exhibit.

In a three node cluster, the orasg service group is online on one of the systems. The service group has the resources and resource dependencies shown in the exhibit. All resources are critical resources and the following service group attributes have been configured:

ManageFaults = ALL FaultPropagation = 0 AutoFailOver = 1

What is the expected behavior when the mnt2 resource fails?

A. The service group fails over to one of the other systems in the cluster.

B. The service group is taken offline and remains offline in the cluster.

C. The mnt2 resource is taken offline, all other resources remain online.

D. The mnt2 resource and all its parent resources are taken offline, the rest remain online.

Correct Answer: A

**QUESTION 4**

What is the primary benefit of implementing the Intelligent Monitoring Framework feature for resources?

A. monitoring of cluster-to-cluster heartbeat

B. monitoring of Virtual machines

C. immediate notification of resource state change

D. monitoring application outside cluster configuration

Correct Answer: C
