QUESTION 1

An administrator is testing a network interface under Veritas Cluster Server (VCS) control and wants to minimize the time for VCS to detect the fault. How can this be accomplished without affecting any other network interfaces under VCS control?

- A. localize the NIC resource type MonitorInterval attribute and modify it to desired value for that particular resource
- B. enable Intelligent Monitoring Framework for that particular NIC type resource to allow asynchronous monitoring
- C. adjust the NIC resource type MonitorInterval attribute for that particular resource by modifying the value in types.cf
- D. override the NIC resource type MonitorInterval attribute and assign it a desired value for that particular resource

Correct Answer: C

QUESTION 2

Which command can an administrator run on each node to gather logs containing information on the installed software, cluster configuration, systems, logs, and related information to create a file for Veritas Technical Support analysis?

- A. `/var/VRTSvca/logs/logcollect`
- B. `/opt/VRTSvca/bin/hagetcf`
- C. `/opt/VRTSvca/bin/nodedump`
- D. `/opt/VRTSvca/bin/haconfig -dump`

Correct Answer: B

QUESTION 3

What are two effects of a failed resource in the service group configuration below? (Select two.)

```
group websp {
    SystemList = { sys1 = 0, sys2 =1 }
}

Apache httpd_Server {
    Critical = 0
    httpDir = "/apache/bin"
    HostName = vcssl1
    Port = 999
    SecondLevelMonitor = 1
    ConfigFile = "/apache/config/httpd.conf"
}

Diskgroup Apache_dg {
    Critical = 0
    DiskGroup = apc1
}

IP Apache_ip {
    Critical = 0
    Device = bde0
    Address = "11.123.99.168"
    NetMask = "255.255.254.0"
}

Mount Apache_mnt {
    Critical = 0
    MountPoint = "/apache"
    BlockDevice = "/dev/vx/dsk/apc1/apcvol1"
    FSType = vxfs
    fsckOpt = "-y"
}
```

- A. Any resource fault leads to a faulted state for the resource.
- B. Any resource fault leads to the service group failing over.
- C. Any resource fault leads to the service group being taken offline.

D. Any resource fault leaves the service group partially online.

E. Any resource fault leaves the service group fully online.

Correct Answer: BC

QUESTION 4

An administrator needs to create a new two-node cluster.

Which configuration allows the administrator to form a cluster using Veritas InfoScale Availability?

A. different operating system vendors for the two servers that share the same big-endian or little-endian format

B. one server running Solaris x86 and the other server running Solaris SPARC

C. one server running Linux RHEL 6 and the other server running Oracle Linux 6

D. one server configured as a virtual machine and the other server configured as a physical machine

Correct Answer: C

QUESTION 5

What is the purpose of the Statistics cluster attribute?

A. to collect metering data for supporting AdaptiveHA

B. to provide performance measurements to VIOM

C. to calculate availability and downtime levels

D. to calculate system and network resource usage

Correct Answer: D
