QUESTION 1

The disk group appdg is imported onto host01 using the vx dg -t import appdg command. Volumes have been started and file systems mounted. The system is then gracefully rebooted.

What happens to the appdg disk group after host01 has restarted?

- A. The appdg disk group remains deported; any host that can access the appdg disk group can import it.
- B. The appdg disk group remains deported; only host01 can import the disk group using the vx dg import appdg command.
- C. The appdg disk group is automatically imported; all volumes in the disk group are automatically started.
- D. The appdg disk group is automatically imported without starting the volumes or mounting the file systems.

Correct Answer: A

QUESTION 2

What is the purpose of a Data Change Object (DCO)?

- A. to manage the FastResync maps for snapshot operations
- B. to hold all changed data on a volume that supports instant snapshots
- C. to replicate data from one plex to another when taking snapshots
- D. to identify the regions in a volume with active writes

Correct Answer: A
