QUESTION 1

Which information is validated during an image verification operation?

- A. data on the client is validated with data on the volume
- B. data on the client is validated with data in the NetBackup catalog
- C. data on the volume is validated with data in the NetBackup catalog
- D. data on the client and the volume is validated with data in the NetBackup catalog

Correct Answer: C

QUESTION 2

A tape library had the robot firmware upgraded and now the robot is reading the barcodes with additional characters.

How should an administrator enable NetBackup 7.6.1 to use the same characters as before the firmware upgrade occurred?

- A. update the Media ID Generation setting
- B. update Media settings
- C. update Device mappings
- D. update the Barcode Rules setting

Correct Answer: A

QUESTION 3

Which command can be used to recover the NBDB from the staging location?

- A. bprecover
- B. bprestore
- C. nbdb_restore
- D. nbdb_unload

Correct Answer: C

QUESTION 4

A NetBackup environment suffers from intermittent network outages between the MSDP Media Server and clients during the backup window. This results in multiple backup failures.

How should an administrator overcome the backup issues?

- A. enable WAN optimization
- B. enable Network Resiliency
- C. configure client-side deduplication
- D. increase the client connect timeout

Correct Answer: B

QUESTION 5

An administrator of a multi-site, multi-domain NetBackup environment wants to be able to provide redundancy for backups as well as protecting the NetBackup image database. All backups must have on-site and off-site disk copies as well as off-site tape copies and must be restorable at all times, even if a single NetBackup server/storage failure occurs.

Which NetBackup feature should the administrator use to implement the functionality?

- A. Replication Director
- B. Automated Image Replication
- C. Storage Lifecycle Policies
- D. Vault

Correct Answer: B
