QUESTION 1

A NetBackup environment with a single tape storage unit is experiencing performance issues when running full backups of a Windows file server with over a million small files. Backups for all other clients on the same network are performing adequately.

What should the administrator modify to improve performance for the client?

- A. enable Windows Change Journal
- B. modify data buffer settings for the data path
- C. enable the Use Accelerator policy attribute
- D. use Flashbackup-Windows policy type

Correct Answer: D

QUESTION 2

Backup images that reside in an MSDP storage pool have been manually expired using bpexpdate. Which step must an administrator perform to manually free the associated space in the storage pool?

- A. run image cleanup on the media server that hosts the MSDP storage server
- B. run an inventory on the MSDP storage pool
- C. run content router queue processing on media server that hosts the MSDP storage server
- D. run content router queue processing on the master server

Correct Answer: C

QUESTION 3

Refer to the exhibit.

Two media servers, sharing a library with 6 tape drives, exist in the NetBackup environment displayed in the exhibit. Both weekly full and daily differential incremental backups need to run for the clients and each schedule has a different retention period. Because of network topology, some clients back up to Media server 1 and some back up to Media server 2. The environment suffers from multiple status 96 failures during the backup window.

How can the administrator minimize the number of failures?

- A. increase the Media unmount delay
- B. configure media multiplexing
- C. enable backups to span tape media
- D. enable media sharing

Correct Answer: D

QUESTION 4

To reduce network use by limiting the number of parallel backup streams, which cloud setting should be modified under the Scalable Storage host property?

- A. Metering > Metering interval
- B. Network Connections > Maximum concurrent jobs
- C. Throttling > Total available bandwidth
- D. Throttling > Sampling interval

Correct Answer: B

QUESTION 5

An administrator tries to suspend an active job from the NetBackup Activity Monitor, but discovers that the option is grayed out.

What is preventing the administrator from suspending the job?

- A. Child jobs are still active.
- B. The parent job is still active
- C. Multiplexing is enabled.
- D. Checkpoint restart is disabled.

Correct Answer: A
