QUESTION 1

An administrator wants deduplication clients in a remote office to perform backups so that less data is sent over the wide area network (WAN).

Which action should the administrator perform to reduce the total amount of data sent over the WAN?

- A. set client attributes to Always use the media server
- B. set client attributes to Always use client-side deduplication
- C. set deduplication disk pool to Limit I/O streams
- D. enable deduplication stream handlers for the clients

Correct Answer: B

QUESTION 2

An administrator wishes to modify the Override default job priority option for an MS-Windows type restore job before the restore job begins.

Where in the Microsoft Windows Backup, Archive, and Restore console can the administrator configure this option?

- A. after clicking the Restore button, in the Restore Marked Files dialog box
- B. at the bottom of the options listed in File> NetBackup Client Properties> Network
- C. in the Backup, Archive, and Restore window, under the Restore Files tab
- D. within File> Specify NetBackup Machines and Policy Type

Correct Answer: A

QUESTION 3

An administrator needs to store secure tape copies of protected data to an offsite location. How can the administrator automatically eject tape media daily and create detailed reports?

- A. encrypt the tapes using software encryption and use a storage lifecycle policy to perform automatic ejects and create reports
- B. enable the encryption attribute on the vault policy to perform automated ejects and create reports
- C. use tape drives that support hardware encryption and use a vault policy to perform automated ejects and create reports
- D. use tape drives that support hardware encryption and use a storage lifecycle policy to perform automated ejects and create reports

Correct Answer: A

QUESTION 4

An administrator notices that backups are failing for clients added to a new backup policy. The backups attempt to run again after 10 minutes.

How can the administrator modify the time between backup attempts?

- A. modify the Job retry delay host property
- B. modify the Policy update interval host property
- C. modify the Schedule backup attempts host property
- D. modify the Take checkpoints every value in the backup policy

Correct Answer: C

QUESTION 5

Which feature is enabled after adding a master server to the Trusted Master Servers tab?

- A. backup of clients in other master server domains
- B. remote console to another master server
- C. targeted Auto Image Replication
- D. remote catalog backups

Correct Answer: C
