QUESTION 1

Which two actions should an administrator take to allow NetBackup to manage the allocation of volumes to volume pools? (Select two.)

- A. define a scratch pool and add all of the volumes to it so NetBackup will move volumes to the other pools as volumes are needed
- B. assign volumes to all volume pools as required in the environment
- C. define a scratch pool with assigned volumes so NetBackup will move the assigned volumes to other pools as volumes are needed
- D. create volume pools as required, but refrain from adding volumes to the pools
- E. assign volumes to NetBackup and DataStore volume pools so NetBackup will move the assigned volumes to other pools as volumes are needed

Correct Answer: AD

QUESTION 2

In which scenario is Use Accelerator unavailable in a backup policy?

- A. for VMware virtual machines with a Linux guest OS
- B. for virtual machines hosted on a Hyper-V Host using WMI
- C. for a NetApp NDMP filer
- D. for an Exchange database availability group (DAG)

Correct Answer: C

QUESTION 3

A NetBackup Master Server has many backups running each night to an MSDP pool that take a long time to complete. While these backups are running, replication jobs are queued.

Which action should the administrator perform to ensure replications can occur without waiting for the backups to complete?

- A. increase the replication job priority
- B. create a new disk storage unit to be used for replications
- C. increase the maximum concurrent jobs for the disk storage unit
- D. increase the maximum I/O streams for the disk pool

Correct Answer: D

QUESTION 4

A Netbackup environment suffers from intermittent network outages between the Media Server Drduplication Pool (MSOP) media server and clients during the backup window.

This results in multiple backup failures.

How should an administrator overcome the backup failure issue?

- A. enable Network Resiliency
- B. configure client-side deduplication
- C. increase the client connect timeout
- D. increase the CR_STATS_TIMLR interval

Correct Answer: A

QUESTION 5

A Windows policy protects over 100 servers using the directive ALL_LOCAL_DRIVES. The backup window for this policy is a two-hour window that is unused by any other policy. When the jobs run, the overall performance of the disk storage unit is degraded.

Which setting should the administrator modify to reduce the number of concurrent streams writing to the disk storage unit to 10 during the backup window?

- A. enable the "Maximum Data streams" property
- B. enable the "Limit Jobs per policy" attribute
- C. set the "Maximum jobs per client" host property to 10
- D. enable multiplexing for the storage unit and set the value to 10

Correct Answer: B
