QUESTION 1

An administrator has decided to set up a VM backup job covering their Microsoft SOL servers. What feature must be enabled to ensure quiescence of the SQL databases during the backup?
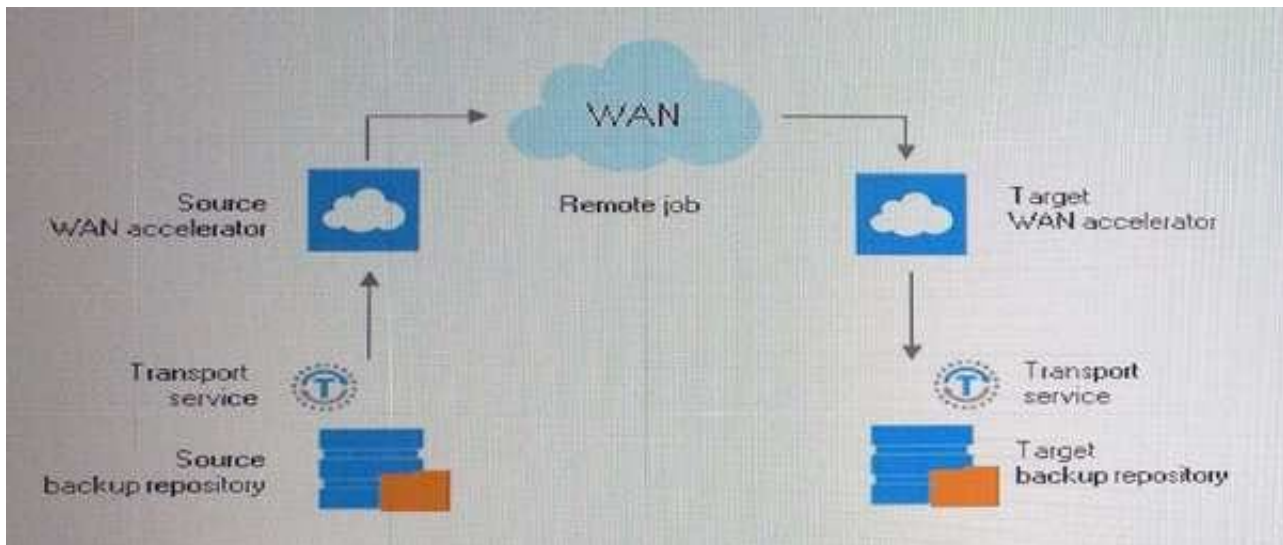

A. Enable Microsoft SQL server plug-in.

B. Enable application-aware processing.

C. Enable Microsoft Windows OS processing.

D. Enable Microsoft SQL server agent on the VMs

Correct Answer: B

Explanation: According to the Veeam Agent for Microsoft Windows User Guide1, you need to enable application-aware processing to ensure quiescence of the SQL databases during the backup. Application-aware processing allows Veeam Agent for Microsoft Windows to create transactionally consistent backups of SQL Server VMs.

QUESTION 2

In the VeeamWAN folder created by the Veeam Backup and Replication WAN accelerator, select the correct type of source and target data stored in the VeeamWAN folder:

Hot Area:

Answer Area

Source
☐
Global cache data
Digest Files

Target
☐
Global cache data
Digest Files

Correct Answer:

Answer Area

Source
☐
Global cache data
Digest Files

Target
☐
Global cache data
Digest Files

QUESTION 3

Which of the following statements is true regarding the Veeam Backup and Replication integration with supported Storage Systems for VMware vSphere are true? (Choose three).

A. On storage accesses through NFS, VMs with snapshots will be skipped from Backup from Storage Snapshots

B. Veeam Backup and Replication can backup virtual machines from a supported secondary storage array

C. On storage accessed through NFS, VMs with snapshots can be protected with Backup from Storage Snapshots

D. When Backup from Storage Snapshots is performed, VMware shapshot is never utilized

E. Enabling Backup from Storage Snapshots for all backup jobs are not recommended

Correct Answer: ABE

QUESTION 4

Veeam Backup and Replication in-line deduplication is most helpful when: (Choose two.)

A. VMs that need to be backed up are highly transactional

B. VMs are created from the same template and Per-VM Backup Files are disabled

C. VMware vSphere Changed Block Tracking is disabled

D. VMs that need to be backed up have a lot of free space on their disks

Correct Answer: BD

QUESTION 5

When is the mount server component used?

A. When there are multiple backup servers

B. When the remote backup repository is a CIFS share

C. When restoring files or application items with Veeam Explorers

D. When backing up to tape at a remote site

Correct Answer: C
