QUESTION 1

A Citrix XenApp administrator needs to apply a policy to all users regardless of connection type. Which type of policy should the administrator create?

- A. Unfiltered User policy
- B. Unfiltered Computer policy
- C. User policy filtered by worker group
- D. Computer policy filtered by worker group

Correct Answer: A

QUESTION 2

Scenario: A XenApp administrator has been tasked with building XenApp servers as generically as possible. Other than the operating system, required updates, patches and anti-virus software, the servers are to be kept as identical as possible to allow for quick disaster recovery should the need arise. Bandwidth is restricted and the client machines run operating systems other than Windows. Therefore, streaming applications to the client machines is NOT possible.

Which setting must the administrator select when publishing the application?

- A. Streamed to client
- B. Accessed from a server, streamed to server
- C. Accessed from a server, installed application
- D. Streamed if possible, otherwise accessed from a server

Correct Answer: B

QUESTION 3

A XenApp administrator does NOT have access to the AppCenter console at the moment and needs to be able to confirm which server in the farm is currently the zone data collector.

Which command line utility would provide the information the administrator needs?

- A. qfarm
- B. qfarm /load
- C. dsmaint verifylhc
- D. dsmaint compare

Correct Answer: A

QUESTION 4

Which two Citrix printing tools can assist a XenApp administrator when working with printer drivers? (Choose two.)

- A. Print Migrator
- B. Stress Printers
- C. Print Detective
- D. The Citrix Printing Tool

Correct Answer: BC

QUESTION 5

Scenario: Employees at a company can access Microsoft Outlook 2010 and Adobe Reader offline. These employees complain that they CANNOT view PDF files when they receive emails containing attached PDF files.

Which action can the administrator take to solve this problem?

- A. Publish the two applications with the same settings from the AppCenter.
- B. Precache the two packages on the users\' computers instead of streaming them at launch time.
- C. Create a new streaming profile to publish that links the Office 2010 streaming package with the Adobe Reader streaming package.
- D. When profiling, choose \'Advanced Install - Select files and folders\' and copy the application executables from the two applications into each application profile.

Correct Answer: C

QUESTION 6

Scenario: An administrator manages a XenApp farm that uses only hosted applications. All users access the hosted applications through Web Interface using the online plug-in that does NOT require administrative rights to install.

Which method should the administrator use to deliver the required client plug-in with minimal effort?

- A. Batch files
- B. Login scripts
- C. Citrix Web Interface
- D. Microsoft Group Policy
- E. Citrix Receiver Updater
- F. Citrix Merchandising Server

Correct Answer: C

QUESTION 7

Scenario: A server farm consists of servers with 8 GB and 16 GB of RAM. The administrator wants to ensure that the servers with 16 GB of RAM receive more sessions than the 8 GB servers.

In order to distribute the session load equitably among both types of servers, the administrator could assign the _____. (Choose the correct option to complete the sentence.)

- A. default load evaluator rule to all servers
- B. advanced load evaluator rule to all servers
- C. default load evaluator rule to all 16 GB servers
- D. advanced load evaluator rule to all 16 GB servers

Correct Answer: B

QUESTION 8

Scenario: A company has two XenApp 6.5 farms and two Web Interface servers, each hosting a specific business application. Because of legal reasons, the applications CANNOT be delivered from a single farm. Users complain that they often use the wrong URL or do NOT see the application they require.

Which two tasks can an administrator complete to reduce the users' confusion? (Choose two.)

- A. Use a load balancer to provide a single URL to both Web Interface servers.
- B. On each Web Interface server, create a new Web Interface site for the alternate farm.
- C. On each Web Interface server, add a second farm that is configured with at least one XML gateway from the alternate farm.
- D. On each Web Interface server, modify the existing farm configuration and add at least one XML gateway from the alternate farm.
- E. Customize the Web Interface footer text on both Web Interface servers to remind the users of which applications are provided by the current server.

Correct Answer: AC

QUESTION 9

Scenario: A server farm has three policies applied using the Client IP address and User filters.

Policy A (priority 1) prevents client IP addresses in the 208.29.80.* range from accessing client, optical and removable drives. No other settings are configured.

Policy B (priority 2) allows client IP addresses in the 208.29.80.* range to access network drives. All other settings are

disabled.

Policy C (priority 3) allows all domain users to access client, optical and removable drives. No other settings are configured.

Which drives will be available to a domain user accessing the server farm from a client using the 208.29.80.152 IP address?

- A. No drives
- B. Network drives
- C. Client, optical and removable drives
- D. Network, client and removable drives
- E. Network, client, optical and removable drives

Correct Answer: B

QUESTION 10

Users have requested that their Citrix connections automatically reconnect when they log in to the Citrix Web Interface after they have been disconnected while traveling between sites.

Which Web Interface feature could the XenApp administrator configure to accomplish this task?

- A. Persistent URLs
- B. Session Reliability
- C. Workspace Control
- D. Session preferences

Correct Answer: C

QUESTION 11

An administrator wants to configure configuration logging for two XenApp farms. Which two tasks must the administrator configure to accomplish this? (Choose two.)

- A. Configure separate MS SQL databases for each XenApp farm.
- B. Configure one MS SQL database for both XenApp farms to connect to.
- C. Enable configuration logging for each farm and connect to a single database.
- D. Enable configuration logging for each farm and connect to two separate databases.

Correct Answer: AD

QUESTION 12

A Senior Administrator wants to give a Junior Administrator complete rights to a folder of applications while restricting some of his permissions to the overall farm. The Senior Administrator must grant _____. (Choose the correct option to complete the sentence.)

- A. Custom Permissions at the farm level and folder level
- B. Read Only Permissions at the farm level and Full Permissions at the folder level
- C. Custom Permissions at the farm level, then Full Permissions within the application folder
- D. Full Permissions at the farm level and then Custom Permissions within the application folder

Correct Answer: C

QUESTION 13

Scenario: An administrator is setting up access for the User Support team. The administrator wants to give this team access to manage user sessions so that they can disconnect and either clear or log-off user sessions for troubleshooting purposes.

Which node would the administrator use in order to delegate these permissions in the AppCenter?

- A. Policies
- B. Servers
- C. Applications
- D. Administrators

Correct Answer: D

QUESTION 14

Scenario: A company has one XenApp farm and two Web Interface servers configured with explicit authentication. Users trying to take advantage of the Smooth Roaming feature by moving between client devices, complain about inconsistent behavior.

In order to address this behavior, the administrator should ensure _____. (Choose the correct option to complete the sentence.)

- A. that both Web Interface servers are upgraded to the same version
- B. that both Web Interface servers are joined to the same domain as the XenApp farm
- C. the Workspace Control settings are correct and identical on both Web Interface servers
- D. the XenApp policy is configured to trust XML requests sent from both Web Interface servers

Correct Answer: C

QUESTION 15

Scenario: Three Web Interface sites are configured on different servers in a farm. The administrator wants to ensure that users are always able to access their applications through the Citrix Receiver.

How can the administrator configure the Web Interface sites to meet this requirement?

- A. Enable site redirection for the sites.
- B. Configure backup URLs for the sites.
- C. Configure the direct access method for the sites.
- D. Configure the '\\bypass any failed server for\\' setting for the sites.

Correct Answer: B
