QUESTION 1

Which service is started at boot time, instead of on demand?

- A. ping
- B. walld
- C. telnet
- D. sprayd
- E. mountd
- F. rpcbind

Correct Answer: E

QUESTION 2

The security administrator wishes to create a rights profile which is a superset of another rights profile. Certain commands in the new rights profile are to be run with different attributes to the original profile. How would you implement this using the RBAC framework?

- A. Copy the lines in the `/etc/exec_attr` file for the original rights profile and assign them to the new rights profile. Modify the attributes as necessary.
- B. Modify the `/etc/exec_attr` file to use a shell script which checks the rights profile being used and then executes the commands with the appropriate attributes using the `pfexec` command.
- C. Assign both rights profiles to the appropriate roles and give a higher priority to the commands for the new rights profile when different attributes are required.
- D. Use the `profiles` keyword when defining the new rights profile in the `/etc/prof_attr` file to import the original rights profile as part of the new rights profile.

Correct Answer: B

QUESTION 3

Which Solaris tools allow a system administrator to remotely manage Solaris 10 OS updates for a number of remote systems from a centralized server location? (Choose two.)

- A. `/usr/sbin/smpatch`
- B. `/usr/sbin/patchmgr`
- C. `/usr/sbin/patchadd`
- D. `/usr/bin/updatesmanager`

Correct Answer: AD

QUESTION 4

What are two functions of the check script? (Choose two.)

- A. creates the rules file
- B. creates the profile files
- C. verifies the syntax of the rules and profile files
- D. verifies the syntax of the begin and finish scripts
- E. creates the rules.ok file if there are no syntax errors

Correct Answer: CE

QUESTION 5

How many data sources can be specified in the Name Service Switch file for each of the data types? (Choose two.)

- A. only one
- B. a minimum of two
- C. a minimum of one
- D. a maximum of four
- E. a maximum depending on the data type
- F. a maximum depending on the system type

Correct Answer: AD

QUESTION 6

You run an IT department and are responsible for purchasing hardware within a given budget. You are aware that 70 gigabytes of data housed in a series of traditional disk slices is becoming critical to the business.

You decide to mirror the data, but have concerns about write performance. You can purchase the disk space to mirror the data.

What configuration enhancement will achieve the best write performance?

- A. arranging for the mirror to consist of just two disks
- B. using RAID 5 to hold the data in each half of the mirror
- C. striping the data across the disks in each half of the mirror

D. concatenating the data across the disks in each half of the mirror

Correct Answer: C

QUESTION 7

The root (/) file system is mirrored with a primary and secondary submirror. What is the last step that must be performed on a SPARC-based system so that the system boots automatically from the secondary submirror when a primary submirror fails?

- A. use the setenv command to set the auto-boot? variable to false
- B. use the nvalias command to redefine the device alias disk so that it references the primary submirror
- C. use the nvalias command to define a backup_root device alias, which references the secondary submirror
- D. use the setenv command to redefine the boot-device variable so that it references both the primary and secondary submirrors

Correct Answer: D

QUESTION 8

Which three statements accurately describe the /etc/nsswitch.conf file? (Choose three.)

- A. The /etc/nsswitch.conf file includes a list of databases that are sources of information about IP addresses, users, and groups.
- B. The /etc/nsswitch.conf file can specify a number of data sources, such as NIS, NIS+, LDAP, DNS, or local files.
- C. The /etc/nsswitch.conf file must be created manually as part of the installation process.
- D. Each data item in the /etc/nsswitch.conf file must have at least one data source, but cannot have more than three data sources.
- E. The /etc/nsswitch.conf file is only necessary if multiple data sources are being used to track IP addresses, users, and groups.
- F. The lookup order for each item is specified in the /etc/nsswitch.conf file.

Correct Answer: ABF

QUESTION 9

You believe that you have a correctly configured boot server on the local network for the SPARC system currently being installed. Your JumpStart configuration is based on files only and does NOT use a naming service at any stage.

Upon running the following command:

```
boot net -install the client displays the following output: Boot device: /pci@1f,0/pci@1,1/network@c,1 File and args: -install 38600 panic - boot: Could not mount filesystem. Program terminated ok
```

What is the cause of this problem?

- A. The rpc.bootparamd daemon is NOT running on the boot server.
- B. The root file system is NOT shared using NFS from the boot server.
- C. The installation server is missing the SUNWcsu and SUNWcsr packages.
- D. The class file contains a reference to an NFS mount which is NOT available.

Correct Answer: B

QUESTION 10

After installing the OS, you have realized that you did not configure the name service properly and selected files when you should have selected 1dap. Which answer describes how to re-configure this system as an idap client?

- A. Restart the suninstaii installation program.
- B. Configure the /var/ldap/ldap_client_f file and the /etc/defaultdomainfiles for ldap.
- C. Run the ldapclient command.
- D. Move the /etc/nsswitch.ldap file to /etc/nsswitch.conf. Configure the /var/ldap/ldap_client_f file and the /etc/defaultdomain file.

Correct Answer: C

QUESTION 11

Given these entries in /etc/nsswitch.conf:

```
ipnodes: files [NOTFOUND=return] hosts: nis [NOTFOUND=return] files
```

When the NIS service is functioning, what happens if a host name is looked up? (Choose three.)

- A. If an entry exists in the NIS database, the lookup always succeeds.
- B. If an entry exists in /etc/inet/hosts, the lookup always succeeds.
- C. If an entry does NOT exist in the NIS database, the lookup always fails.
- D. If an entry exists in /etc/inet/ipnodes, the lookup always succeeds.
- E. If an entry does NOT exist in /etc/inet/hosts, the lookup always fails.
- F. If an entry does NOT exist in either NIS or /etc/inet/ipnodes, the lookup always fails.

Correct Answer: ADF

QUESTION 12

Which Solaris 10 GUI tools can be used to display a list of all currently installed Sun Solaris 10 patches. Including the patch ID, a synopsis of the patch release date, the download size, and any special handling requirements?

- A. /usr/sbin/smpatch
- B. /usr/sbin/patchadd
- C. /usr/sbin/patchmgr
- D. /usr/bin/updatesmanager

Correct Answer: D
