100% Passing Guarantee  
100% Money Back Assurance

Following Questions and Answers are all new published by Citrix  
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

### QUESTION 1

What is the key benefit to enabling Session Reuse on an SSL offload VServer?

- A. The number of HTTP requests to the backend services are decreased.
- B. Resumed SSL sessions are more secure than sessions that require renegotiation.
- C. Reusing existing sessions decreases the number of TCP connections made to backend services.
- D. A partial SSL handshake is sent over the existing SSL connection, reducing CPU and bandwidth usage.

Correct Answer: D

---

### QUESTION 2

Scenario: When the NetScaler was set up, compression was enabled. The network engineer would like to disable compression ONLY for a particular virtual server. How could the engineer accomplish this?

- A. Uncheck Compression in the system basic features.
- B. Create a policy with a NOCOMPRESS action, bound to the global request point.
- C. Disable compression on the services or service groups bound to the virtual server.
- D. Create a policy with a NOCOMPRESS action, bound the virtual server Compression (request) point.

Correct Answer: C

---

### QUESTION 3

Scenario: A NetScaler environment uses two-factor authentication and the second authentication

method is AD. A user logs in to the environment but does NOT receive access to the resources that the user should have access to.

How can an engineer determine the AD authentication issue on the NetScaler?

- A. Check NSlogs
- B. Use nsconmsg
- C. Use the cat aaad.debug command
- D. Check the authorization configuration

Correct Answer: C

---

#### QUESTION 4

Scenario: Company Inc. wants to tag incoming requests with a header that indicates which browser is being used on the connection. This helps the server keep track of the browsers after the NetScaler has delivered the connections to the back end.

The engineer should create \_\_\_\_\_ actions to \_\_\_\_\_. (Choose the correct set of options to complete the sentence.)

- A. rewrite; insert tags on the client header
- B. responder; separate the client requests
- C. rewrite; insert tags on the server response
- D. responder; filter the browser type on the client header

Correct Answer: A

---

#### QUESTION 5

Scenario: An organization has a fair usage policy that limits each customer to a maximum of five active connections in any given second. A NetScaler Engineer is given the task of implementing the requirements to enforce a policy using the Rate Limiting feature on NetScaler.

Which commands should the network engineer execute to create a proper selector and limit identifier that fulfills the policy requirement?

- A. add stream selector API\_selector CLIENT.IP.SRC add ns limitIdentifier API\_limitidf -threshold 5 -mode CONNECTION -timeslice 1000 selectorName API\_selector
- B. add stream selector API\_selector HTTP.REQ.URL add ns limitIdentifier API\_limitidf -threshold 5 -mode CONNECTION -timeslice 1000 selectorName API\_selector
- C. add stream selector API\_selector HTTP.REQ.URL add ns limitIdentifier limit\_req -mode request\_rate -limitType smooth -timeslice 1000 -Threshold 5 selectorName API\_selector
- D. add stream selector API\_selector CLIENT.IP.SRC add ns limitIdentifier limit\_req -mode request\_rate -limitType smooth -timeslice 1000 -Threshold 5 selectorName API\_selector

Correct Answer: A

---

#### QUESTION 6

What does the TCP Buffering feature on the NetScaler accomplish?

- A. It enables the TCP options field syn-cookie.
- B. It optimizes the client and server TCP window size.
- C. It buffers incoming client connections on the NetScaler.
- D. It offloads the server response to the NetScaler before delivering it to the client.

Correct Answer: D

---

### QUESTION 7

On which two objects could a NetScaler Engineer bind cipher groups? (Choose two.)

- A. Server
- B. Service
- C. SSL policy
- D. SSL profile
- E. Virtual server

Correct Answer: BE

---

### QUESTION 8

Scenario: A network engineer has modified the configuration of a content-switching virtual server,

Website\_main, because a second content-switching server that is capable of handling more connections has been added to the NetScaler implementation. Both servers will remain in operation.

The engineer made the following configuration changes:

```
>set cs vserver Website_main -lbvserver New_Server -backupVserver Old_Server -redirectURL  
http://www.mydomain.com/maintenance -soMethod Connection -soThreshold 1000
```

Why did the engineer enable the spillover option?

- A. To handle incoming connections in case the new server is unavailable
- B. To handle the extra connections using the old server without dropping them
- C. To redirect the extra connections to the Maintenance website when it is needed
- D. To handle incoming connections while the server reaches its limit of connections

Correct Answer: B

---

### QUESTION 9

Scenario: A network engineer created an IPv6 virtual server on the NetScaler. The virtual server is using a service group with two IPv4 servers bound to it. When testing access to the virtual server from a client configured with an IPv6 address, he is unable to connect.

What could be the reason for this issue?

- A. The NetScaler is disabled for NAT.

- B. IPv6 protocol translation is disabled.
- C. An IPv6 address on the NetScaler is not bound to the correct VLAN.
- D. The NetScaler does not have an INAT rule to convert IPv4 to IPv6 from the back-end servers.

Correct Answer: B

---

#### QUESTION 10

What are the supported protocols for management authentication?

- A. LOCAL, LDAP, and SAML
- B. RADIUS, LDAP and TACACS+
- C. CERTIFICATE, LDAP and SAML
- D. RADIUS, TACACS+ and CERTIFICATE

Correct Answer: B

---

#### QUESTION 11

Scenario: A NetScaler Engineer needs to enable access to a load-balancing virtual server from two customers that belong to different VLANs, VLAN500 and VLAN600. Each customer must access the services and servers specific to their VLAN and should never be able to reach another customer service or servers.

Traffic Domain (TD) 1 has been created for VLAN500 and Traffic Domain (TD) 2 for VLAN600. Load-balancing services have also been created for each server on TD1 and TD2. The TD for the virtual server is TD 3 and IP address

172.10.0.30.

In order to complete this setup, the engineer should create a load-balancing virtual server with IP 172.10.0.30 on TD 3 and use \_\_\_\_\_. (Choose the correct option to complete the sentence.)

- A. TD2 services as a backup virtual server
- B. TD1 and TD2 services on one virtual server
- C. TD1 and TD2 services on two virtual servers
- D. TD1 on one virtual server and TD2 on second

Correct Answer: D

---

#### QUESTION 12

What should an engineer configure in an environment where two NetScaler appliances are configured in high availability (HA) mode to prevent both nodes from reporting a state of NOT\_UP at the same time?

- A. Fail-Safe Mode
- B. Route Monitors
- C. Command Propagation
- D. Configuration Synchronization

Correct Answer: A
