-  **800,000+** Satisfied Customers

### QUESTION 1

Which two tools can you use to create charts for a dashboard that displays metrics for your BPM project? (Choose two.)

- A. BPM Studio
- B. BAM Composer
- C. BPM Process Composer
- D. BPM Process Workspace
- E. WebCenter Process Spaces

Correct Answer: BD

---

### QUESTION 2

Which two product features might a process analyst use the most in contrast to a process developer? (Choose two.)

- A. Process simulation.
- B. Business rules.
- C. Mediator services.
- D. Web Forms.
- E. BPM Studio.
- F. ADF forms.

Correct Answer: AD

---

### QUESTION 3

Which two statements are true about BPM Suite product architecture? (Choose two.)

- A. The Process Asset Manager is a container of reusable, shared, implementation assets available to all processes within a BPM project.
- B. Business architecture modeling is supported by a third-party product that Oracle resells as part of the BPM Suite 12c product family.
- C. BPM Suite leverages SOA Suite infrastructure and tooling to support key design-time and run-time features.

- D. case Management is an Oracle add-on product to add adaptive case management support to BPM Suite.
- E. BPM Suite supports BPMN process modeling notation in both BPM Process Composer and BPM Studio.

Correct Answer: AD

---

#### QUESTION 4

You are testing a deployed BPM application. You start a process instance, but the processing does not proceed as you anticipated.

Where would you get the most actionable troubleshooting information about your BPM process?

- A. SOA server log file
- B. Business Process Workspace Process Tracking page
- C. WebLogic Console
- D. WebLogic Diagnostic Framework (WLDF)
- E. Enterprise Manager

Correct Answer: D

---

#### QUESTION 5

Which two statements accurately describe how Oracle Web Services Manager works? (Choose two.)

- A. On the client side, the agent coordinates a pipeline of policy interceptors that apply policy assertions to the request in a standardized, predetermined order.
- B. On the service side, policy assertions are processed in reverse order of the client side before the request is delivered to the service.
- C. On the client side, the policy manager coordinates a pipeline of agents that apply policy assertions to the request in the order specified by the developer.
- D. On the service side, policy assertions are processed in the same order as on the client side before the request is delivered to the service.

Correct Answer: AB

---

#### QUESTION 6

Which two statements are true about out-of-the-box metrics support in BPM Suite? (Choose two.)

- A. If you want to know average time spent in each activity in your process, you can look at the workload per process dashboard in Business Process Workspace.
- B. By default, in standard dashboards that display data about in-flight instances, there is a 30- minute delay before up-to-date data appear in the charts.
- C. You can only view out-of-the-box metrics in charts created in Business Process Workspace.
- D. During process execution, when a sampling point is reached, the BPMN Service Engine collects all standard process metrics that are prespecified out-of-the-box.

Correct Answer: CD

---

#### QUESTION 7

Which objective can be accomplished by using business rules in workflow routing?

- A. Create a new routing rule and invoke it immediately.
- B. Create new participants and make them available as targets for routing.
- C. Send a routing sleep back to the previous participant for a workflow stage that is associated with a group vote (parallel) scenario.
- D. Make a routing decision before the task is assigned to the next routing slip participant.

Correct Answer: D

---

#### QUESTION 8

Which statement is true about the architecture of the business rules component?

- A. Facts are vocabulary elements that are used to construct tests and actions for verbal rules.
- B. You can use globals to help users modify rules without having to rework the rule logic.
- C. Unlike decision tables, if-then rules provide conflict resolution and gap analysis.
- D. In the action of a rule, you typically use the Fire RL (Rule Language) verb to invoke inferencing.

Correct Answer: A

---

#### QUESTION 9

Identify the gateway type that disallows an outgoing conditional path.

- A. Exclusive
- B. Inclusive
- C. Parallel
- D. Complex

Correct Answer: C

Explanation: A Parallel Gateway creates parallel paths without checking any conditions; each outgoing Sequence Flow receives a token upon execution of this Gateway Reference: [http://training-coursematerial.com/training/BPMN\\_2.0\\_Gateways#Parallel\\_Gateway](http://training-coursematerial.com/training/BPMN_2.0_Gateways#Parallel_Gateway) (See Parallel Gateway, 2nd line).

---

#### QUESTION 10

The initial performer of a task is determined by the role associated with the swim lane in which the task is modeled except when you use a(n) \_\_\_\_\_.

- A. complex task
- B. user task
- C. FYI task
- D. group task

Correct Answer: A

Explanation: A complex user task uses a complex routing flow that is defined within the humantask. BPM Studio offers a number of human task patterns out of the box, to make it easy to implement the most common types of human tasks. For example, the Simple pattern just assigns individual users or groups. The Management pattern is used for a sequential list of approvers up the management chain. Initiator is for the person who kicks off the process. For most of these, swimlane roles are used to determine assignments. For the Complex task, however, the swimlane is irrelevant, and routing and assignments are typically more complicated. Note: Swimlanes are the horizontal lines that run across the process editor. All flow objects must be placed within a swimlane. Swimlanes can also be used to group flow objects based on the roles defined within your process. Swimlanes that contain user tasks must have roles assigned to them. Swimlanes visually display the role responsible for performing each flow object within your process. Additionally, you can have multiple swimlanes that are assigned to the same role. Swimlanes can make your process more readable when you must use the same role in different parts of the same process.

---

#### QUESTION 11

At design time, web forms created by using the Web Form Designer are associated only with human tasks inside the same \_\_\_\_\_.

- A. process
- B. space
- C. project

D. application

Correct Answer: A

---

### QUESTION 12

Which two statements are true about verbal rules and business phrases? (Choose two.)

- A. You can create a verbal rule with business phrases as a column in a decision table rule.
- B. Derived business phrases are automatically created by using facts, globals, and other information in the rules dictionary.
- C. User-defined business phrases can be explicitly authored to augment derived phrases.
- D. You can mark a verbal rule as draft in the Rules Editor.

Correct Answer: BC

Explanation: Derived business phrases are automatically created using facts, globals and other information in the dictionary while user-defined phrases can be explicitly authored to augment derived phrases.

---

### QUESTION 13

Which two statements are accurate descriptions of how process data objects or project data objects are used? (Choose two.)

- A. A process data object can be based on either a basic data type or a complex data type.
- B. A process data object is associated with a module where it resides.
- C. One of the main benefits of defining process data objects is that you can configure Business Process WorkSpace views to display their values.
- D. Project data objects are not used to share data values between processes.

Correct Answer: AD

Explanation: Basic and complex data types can both be defined as either process or project data objects.

Although project data objects allow you to define data objects that are used by all processes in a project, they are not global data objects. Each process within your project uses its own version of the data object. Project data objects are not used to share data between processes. To share data between processes, you must create data associations.

---

### QUESTION 14

Which two statements are true about business architecture modeling in BPM Suite? (Choose two.)

- A. It fosters a top-down approach that allows for discovery of an organization's processes.
- B. It is required before BPMN modeling can begin for a specific process.
- C. It is supported by enterprise maps, value chain models, and strategy models created in BPM Studio.
- D. It allows you to define high-level processes that span an entire organization.
- E. It uses familiar BPMN notation to graphically describe high-level process areas.

Correct Answer: AD

Explanation: Business Architecture is a methodology for performing high-level analysis of the business processes within your organization. These processes can be high-level processes that span an entire organization or specific, low-level processes performed within a specific group. Business Architecture uses a top-down approach that allows for discovery of your organization's processes. You can define and evaluate high-level goals and map them to specific strategies for achieving them. You can also run reports on Business Architecture components to evaluate performance.

#### QUESTION 15

What determines the life span of the value in a subprocess data object?

- A. process
- B. task
- C. subprocess
- D. project

Correct Answer: D
