  address ipv4 2.2.2.2
  timeout 20

tacacs server tacacs3
  address ipv4 3.3.3.3
  timeout 20
  single-connection
```

- A. The timeout command causes the device to move to the next server after 20 seconds of TACACS inactivity.
- B. The single-connection command causes the device to process one TACACS request and then move to the next server.
- C. The single-connection command causes the device to establish one connection for all TACACS transactions.
- D. The router communicates with the NAS on the default port, TCP 1645

Correct Answer: C

In order for TACACS+ servers to fail over, they must be configured in a TACACS server group, which these are not, which eliminates A and B. D is incorrect.

- B. when the firewall requires strict HTTP inspection
- C. when the firewall receives a FIN packet
- D. when matching ACL entries are configured
- E. when the firewall requires HTTP inspection

F. when matching NAT entries are configured

Correct Answer: ADF

See the following links: <https://supportforums.cisco.com/discussion/11809846/asa-5505-using-nat-allowing-incoming-traffic-https> <https://supportforums.cisco.com/discussion/12473551/asa-what-allowing-return-http-traffic> Also, there is a modified version of this question where answers D and F are replaced with "When the firewall receives a SYN packet" and "When the firewall receives a SYN-ACK packet".
