QUESTION 1

A backup on tape is due to expire in one week. The administrator needs to keep the image available for restore indefinitely. Which two methods can be used to accomplish this goal? (Select two.)

- A. use the bpexptime command to change the expiration date of the image
- B. use the bpretlevel command to customize the retention level
- C. use the bpimmedia command to freeze the tape
- D. use the bpduplicate command to create a copy with an infinite retention
- E. use the vmchange command to change the expiration date of the tape

Correct Answer: AD

QUESTION 2

Under which set of circumstances would a lower priority job run before a higher priority job when both start at the same time?

- A. when the lower priority job has multiplexing enabled and can join an existing multiplex group
- B. when the lower priority job requires media in a volume pool
- C. when the higher priority job can use the media already loaded in the drive
- D. when the higher priority job has multiple streams set to 4 and four tape drives are available

Correct Answer: A

QUESTION 3

A tape library had the robot firmware upgraded and now the robot is reading the barcodes with additional characters. What can be done so that Symantec NetBackup 7.5 uses the same characters as before the firmware upgrade occurred?

- A. update the Media ID Generation setting
- B. update the Robot Type mapping
- C. update the Media Type mapping
- D. update the Barcode Rules setting

Correct Answer: A

QUESTION 4

A Symantec NetBackup 7.5 client is configured to back up to a remote media server. The Backup Selections in the policy contains "c:\windows". The backup fails with the error, "access to the client was not allowed". Which configuration setting is required to correct the problem?

- A. The client name is missing from the media server\\'s client list.
- B. The master server name is missing from the client\\'s server list.
- C. The media server name is missing from the client\\'s server list.
- D. The client name is missing from the master server\\'s client list.

Correct Answer: C

QUESTION 5

An administrator configures STU-A with the "On Demand Only" option. When will backups write to this storage unit?

- A. when the Any Available storage unit is selected in the policy
- B. when all other storage units are unavailable
- C. when the policy specifies STU-A as an attribute
- D. when the storage unit specified in the policy is full or unavailable

Correct Answer: B

QUESTION 6

What is the function of a Storage Server?

- A. to manage SAN clients
- B. to enable disk staging
- C. to control tape libraries
- D. to manage disk pools

Correct Answer: D

QUESTION 7

An administrator has a tape that has been previously used by Symantec NetBackup 7.5 for client backups but no longer contains valid data. The barcode has been changed and the tape has been moved to a different Symantec NetBackup domain. Which action will allow this tape to be used in the new domain?

- A. move the tape to the scratch volume pool
- B. relabel the tape

- C. deassign the media
- D. inventory the robotic library

Correct Answer: B

QUESTION 8

The master server catalog is being recovered to a new server. The administrator receives the message displayed below. Please insert the following media and run the volume configuration wizard or the vmupdate command to update the NetBackup database. Host - train1 MediaID - GBP847 Barcode - GBP847S1 In the Administration Console, barcode GBP847S1 is associated with media ID P847S1. How should the administrator proceed?

- A. use bplabel to change the media ID, then re-inventory the library and perform recovery
- B. find the tape labeled P847S1, insert it into the robot, and then perform recovery
- C. delete the tape and set the media ID generation rule accordingly, then re-inventory the library and run recovery
- D. delete the tape and set the barcode rule accordingly, then re-inventory the library and run recovery

Correct Answer: C

QUESTION 9

An administrator needs a report that displays all images written to both disk and tape for a particular client. Which command should be run to display the report?

- A. bplist -all
- B. bpimmedia -U
- C. bpimagelist -U
- D. bpstulist -all

Correct Answer: B

QUESTION 10

A UNIX client has the mount points listed below. /var /usr /opt /home A backup policy for this client has "Allow multiple data streams" enabled and contains a backup selections list with the ALL_LOCAL_DRIVES directive. It also contains an exclude list that excludes /home. What happens when this backup policy runs?

- A. All backup jobs complete successfully.
- B. Backup jobs are created for all mount points except for /home.
- C. The backup job for /home is partially successful because /home is excluded.
- D. The backup job for /home fails because /home is excluded.

Correct Answer: D

QUESTION 11

Refer to the exhibit.
