B. Modifying the vRAM settings is not permitted when selecting VMware Blast as default protocol.

C. Modifying the vRAM settings is not permitted when selecting Manage using vSphere Client.

D. Configuring vRAM size is only permitted during pool creation.

Correct Answer: C

The VRAM settings that you configure in Horizon Console take precedence over the VRAM settings that can be configured for the virtual machines in vSphere Client or the vSphere Web Client, unless you select the Manage using vSphere Client option. https://docs.vmware.com/en/VMware-Horizon/2209/virtual-desktops/GUID-8C0A6D6E-DCE0-461D-B0BE-EF226B04F642.html Manage using vSphere Client. Select this setting for all non-vGPU options. The 3D Renderer option that is set in vSphere Web Client (or vSphere Client in vSphere 5.1 or later) for a virtual machine determines the type of 3D graphics rendering that takes place. Horizon 7 does not control 3D rendering. In the vSphere Web Client, you can configure the Automatic, Software, or Hardware options. These options have the same effect as they do when you set them in Horizon Administrator. Use this setting when configuring vDGA and AMD Multiuser GPU Using vDGA. This setting is also an option for vSGA. When you select the Manage using vSphere Client option, the Configure VRAM for 3D Guests, Max number of monitors, and Max resolution of any one monitor settings are inactive in Horizon Administrator. You can configure the amount of memory in vSphere Web Client.
