QUESTION 1

An administrator is configuring the on-premises auxiliary components for a first time implementation. During initial testing the administrator notices an error and is unable to browse the environment from a work issued PC located on the internal network. While accessing other internet sites, the administrator has no issues browsing or accessing publicly available sites. After talking with the IT department, the administrator confirmed there have been no new firewall rules added.

Which could be a reason the administrator is having issues accessing the newly created SaaS environment?

A. The Windows 10 profile has not been pushed to the device to allow access to the environment.

B. The administrator is utilizing IPv6 addressing and needs to revert to IPv4 addressing.

C. The VMware IP space has not been whitelisted for access in the administrator\\'s firewall rules.

D. The Workspace ONE environment needs to be upgraded to a compatible version with the customers firewall.

Correct Answer: B

QUESTION 2
