A. A SAML 2.0 Identity Provider

B. A Certificate Private Key

C. A SAML 1.1 Identity Provider

D. A configured LDAP connection

Correct Answer: A

QUESTION 6

Which two steps are mandatory before upgrading VMware Cloud Director appliances from 10.1 to 10.2? (Choose two.)

A. Take a snapshot of the entire VCD appliances cluster.

B. Take a snapshot of the primary VCD appliance.

C. Take a snapshot of the standby VCD appliance.

D. Change the database failover from Manual to Automatic.

E. Change the database failover from Automatic to Manual.

Correct Answer: AD

QUESTION 7

The VMware Cloud Director administrator wants to make sure that the system is able to collect log bundles from all cells at once.

How should the administrator accomplish this goal?

A. Install vRealize Log Insight agent on each cell to redirect logs to a centralized location.

B. Configure a syslog server on each of the cells, and request the logs from the syslog server.

C. Map the log location on the primary cell to a shared folder on each of the other cells in the server group, ensuring they all have read/write rights on the primary.

D. Make sure the NFS server allows read-write access to the shared location by the root system account on each cell.

Correct Answer: D

QUESTION 8

An individual is logged into the VMware Cloud Director tenant portal as organization administrator and would like to create a direct organization virtual data center network. The individual, however, receives a message that insufficient rights are held.

Which role is needed to complete this task?

A. vApp author

B. System administrator

C. Catalog author

D. Tenant administrator

Correct Answer: B

QUESTION 9

What is the final configuration step before a tenant can log into a dedicated vCenter Server using Central Point of Management?

A. The tenant user needs to configure the browser with the generated proxy settings shown in the tenant portal.

B. The system administrator needs to configure the browser with the generated proxy settings shown in the tenant portal.

C. The system administrator needs to configure additional permissions in vCenter Server for the tenant.

D. The tenant user has to connect to a VPN connection in the network where the vCenter Server is connected.

Correct Answer: B

QUESTION 10

An administrator is planning a new VMware Cloud Director deployment and is concerned about secure communications between the clients and servers.

Which two recommended steps would ensure secure communications between the clients and servers? (Choose two.)

A. VMware Cloud Director automatically creates self-signed certificates.

B. Create a single certificate for each member of the server group, and import the certificates into the host keystores.

C. Create two certificates for the server group, and import the certificates into each cell\\'s keystore.

D. Create a single certificate and upload it through the Service Provider Portal to all members of the server group.

E. Create or use an existing wildcard certificate, and import it into each cell\\'s keystore.

Correct Answer: CE
