QUESTION 1

Refer to the ACME Financials design use case.

ACME Financials Design Use Case

1. Introduction

1.1 Business Overview

ACME Financials is an investment firm that has established itself as a leader in USA's fast-moving financial asset management market and has around 1000 employees.

ACME plans to transform its end-user computing resources to the digital workspace. ACME wants a secure platform that is available from any device and from anywhere, as well as a solution that reduces operating costs.

ACME's major business driver for the digital workplace is to enable employees to work remotely, and to enable the secure access to all of its resources from anywhere and any device while enhancing security with multi-factor authentication. The solution should support its BYOD strategy and let remote employees use their own laptop, desktop, or mobile device to access the resources from any location.

ACME also wants to remove the need to supply and manage desktop hardware to external contractors. Because financial data is highly sensitive, the firm needs a technology that would protect customer and other critical information - even when accessed on a mobile device. ACME is looking to improve the security of the desktop and application platforms across the enterprise. In addition to using endpoint security tools and multi-factor authentication, ACME insists on using additional security and controls to provide the highest level of security and protection to services and applications.

ACME currently uses a VPN-based remote access solution. ACME would like to remove additional components that add support or management complexity, and device dependence for remote access users. ACME is looking to achieve the same access to virtual desktops and Windows 10 or mobile applications, both inside and outside of the ACME enterprise network.

ACME is very keen on enforcing standardization to keep the IT infrastructure as consistent as possible. IT wants to use standardized versions of Windows (Windows 10), consistent configurations, and application delivery from a central source. All while maintaining the compliance of every device that requires encryption, password and PIN protection, as well as update -and anti-virus control.

To simplify and standardize desktop and application delivery, ACME wants to offer a service catalog based approach based on ACME IT standards. This will allow ACME to effectively deliver and manage resources, allowing IT to deliver device and application services that meet business and technical needs, while maximizing the use of shared IT computing resources.

Additional Facts Speaking to the developers revealed that most apps are standardized apps from public app-stores, but ACME uses some their in-house developed, critical mobile apps, where some of the developers have already left the company, so that they cannot be rewritten in a short amount of time. To reduce operating costs, ACME has already moved to Office 365 and is currently running a few migrations from on-premises to the cloud for other applications. ACME's IT says that it is a Microsoft Windows only shop, but the assessment shows that currently most of the managers are using Apple devices. ACME currently uses directory services and two-factor authentication mechanisms (Radius) for internal and external access. ACME requires to support Single Sign-On (SSO) integration with their current authentication solutions. They also require to use SSO whenever possible, as they do not believe in having multiple user accounts and passwords for their end users.

ACME wants the solution to provide mechanisms to provide a secure e-mail solution to any device that complies to global security standards even for BYO devices.

1.2 High Level User Classification

680 Office workers (call center, corporate and office administrators) use standardized PCs or Thin-Clients to access ACME's core apps and tools.

240 Remote-office workers use the company's CYOD initiative and use these devices (Notebooks, Convertibles, Tablets, Android phones) to access their apps and tools from remote.

30 Executives use Apple Mac Books as well as iPhones and iPads to work on- and off-premises.

80 IT -admins and software developers are using high-end workstations with administrative access.

1.3 High Level Application Assessment

ACME currently has 261 applications, of which 186 are based on Microsoft Windows.

Today, users are allocated applications via AD group membership.

75 applications are either web-based or SaaS-based, including Office 365.

A major incident recently meant sales workers were disappearing suddenly along with their data and laptops on some new colonies.

Any external access should require multi-factor authentication. Access from the internal network should work seamlessly with SSO for the core applications. High-security applications also require MFA from internal access.

The address ranges of the HQ datacenter are as follows:

?

172.16.0.0/16 internal

?

80.34.57.20/21 external

2. Initial Stakeholder Interview Findings

In addition to the goals summarized in the previous section, the following are findings from initial interviews with the key stakeholders and an analysis of their service level agreements.

The design must use the F5 Loadbalancer and should be as redundant as possible.

Qualified IT personal is hard to find these days. If possible, reduce operational costs and try to automate or outsource basic IT-tasks.

ACME is very particular about meeting the go-live date. If there are unforeseen delays, the project may not be delivered for the required go-live date.

After the successful deployment of Workspace ONE, ACME plans to move their virtual desktop infrastructure to Horizon on AWS. But there are still Web apps and file services which will run in the on-premises datacenter.

Which two components are still needed in the on-premises datacenter? (Choose two.)

- A. Content gateway
- B. PowerShell host for e-mail
- C. Layer 2 connection between Horizon on AWS on the ACME datacenter
- D. AWS Storage
- E. Identity bridging

Correct Answer: CE

QUESTION 2

Refer to the ACME Financials design use case.

ACME Financials Design Use Case 1. Introduction

1.1 Business Overview

ACME Financials is an investment firm that has established itself as a leader in USA's fast-moving financial asset management market and has around 1000 employees.

ACME plans to transform its end-user computing resources to the digital workspace. ACME wants a secure platform that is available from any device and from anywhere, as well as a solution that reduces operating costs.

2. Initial Stakeholder Interview Findings

In addition to the goals summarized in the previous section, the following are findings from initial interviews with the key stakeholders and an analysis of their service level agreements.

The design must use the F5 Loadbalancer and should be as redundant as possible.

Qualified IT personal is hard to find these days. If possible, reduce operational costs and try to automate or outsource basic IT-tasks.

ACME is very particular about meeting the go-live date. If there are unforeseen delays, the project may not be delivered for the required go-live date.

ACME continues to use directory services for authentication.

Which two ports are needed to be accessed from the Cloud Connector to the Workspace ONE UEM console server? (Choose two.)

- A. TCP 2195
- B. UDP 443
- C. TCP 80
- D. UDP 22
- E. TCP 443

Correct Answer: CE

Reference: https://docs.vmware.com/en/VMware-Workspace-ONE-UEM/1902/UEM_-_Recommended_Architecture/GUID-AWT-NETWORKREQS.html

QUESTION 3

What are three system requirements before beginning the Workspace ONE and Active Directory Federation Services integration? (Choose three.)

- A. Active Directory Integration
- B. Enterprise Integration Service
- C. Microsoft Active Directory Federation Services administrator role
- D. VMware Identity Manager using VMware Identity Manager connector
- E. Ensure the same users is synced only to Active Directory Federation Services

F. A VMware Identity Manager tenant with user role

Correct Answer: CDF

Reference: https://docs.vmware.com/en/VMware-Identity-Manager/services/workspaceone_adfs_integration/GUID-8A111967-D3AB-49F7-8139-27EAC5C28A4A.html

QUESTION 4

What statement is true about OAuth2?

- A. It is lighter than SAML, it is XML-based rather than JSON.
- B. It is heavier than SAML, it is JSON-based rather than XML.
- C. It is lighter than SAML, it is JSON-based rather than XML.
- D. It is heavier than SAML, it is XML-based rather than JSON.

Correct Answer: C

QUESTION 5

Which three enrollment options are supported with Workspace ONE and Azure AD? (Choose three.)

- A. Only supported on Dell EMC devices.
- B. Enroll through On-Premise Exchange.
- C. Enroll through Out of Box Experience.
- D. Enroll through Office 365 apps.
- E. Enroll an Azure AD managed device into Workspace ONE UEM.
- F. Enroll in the local AD and then sync to Azure AD.

Correct Answer: CDE

Reference: <https://docs.vmware.com/en/VMware-Workspace-ONE-UEM/1810/Workspace-ONE-UEM-Windows-Desktop-Device-Management/GUID-AWT-ENROLL-CLOUD.html>

QUESTION 6

Refer to the ACME Financials design use case.

ACME Financials Design Use Case

1. Introduction

1.1 Business Overview

ACME Financials is an investment firm that has established itself as a leader in USA's fast-moving financial asset management market and has around 1000 employees.

ACME plans to transform its end-user computing resources to the digital workspace. ACME wants a secure platform that is available from any device and from anywhere, as well as a solution that reduces operating costs.

ACME's major business driver for the digital workplace is to enable employees to work remotely, and to enable the secure access to all of its resources from anywhere and any device while enhancing security with multi-factor authentication. The solution should support its BYOD strategy and let remote employees use their own laptop, desktop, or mobile device to access the resources from any location.

ACME also wants to remove the need to supply and manage desktop hardware to external contractors. Because financial data is highly sensitive, the firm needs a technology that would protect customer and other critical information - even when accessed on a mobile device. ACME is looking to improve the security of the desktop and application platforms across the enterprise. In addition to using endpoint security tools and multi-factor authentication, ACME insists on using additional security and controls to provide the highest level of security and protection to services and applications.

ACME currently uses a VPN-based remote access solution. ACME would like to remove additional components that add support or management complexity, and device dependence for remote access users. ACME is looking to achieve the same access to virtual desktops and Windows 10 or mobile applications, both inside and outside of the ACME enterprise network.

ACME is very keen on enforcing standardization to keep the IT infrastructure as consistent as possible. IT wants to use standardized versions of Windows (Windows 10), consistent configurations, and application delivery from a central source. All while maintaining the compliance of every device that requires encryption, password and PIN protection, as well as update -and anti-virus control.

To simplify and standardize desktop and application delivery, ACME wants to offer a service catalog based approach based on ACME IT standards. This will allow ACME to effectively deliver and manage resources, allowing IT to deliver device and application services that meet business and technical needs, while maximizing the use of shared IT computing resources.

Additional Facts Speaking to the developers revealed that most apps are standardized apps from public app-stores, but ACME uses some their in-house developed, critical mobile apps, where some of the developers have already left the company, so that they cannot be rewritten in a short amount of time. The design must use the F5 Loadbalancer and should be as redundant as possible.

Qualified IT personal is hard to find these days. If possible, reduce operational costs and try to automate or outsource basic IT-tasks.

ACME is very particular about meeting the go-live date. If there are unforeseen delays, the project may not be delivered for the required go-live date.

What are three required components in the logical design? (Choose three.)

- A. VMware Universal Access Gateways (UAG)
- B. Airwatch Cloud Connector
- C. Secure e-mail gateway
- D. Microsoft Exchange Server
- E. Microsoft System Center Virtual Machine Manager

Correct Answer: ABD

QUESTION 8

What is required to configure VMware Horizon View to connect to VMware Identity Manager?

- A. Add a SAML connector.
- B. Add a OAUTH2 connector.
- C. Add a SAML authenticator.
- D. Add a OAUTH2 authenticator.

Correct Answer: C

Reference: <https://docs.vmware.com/en/VMware-Identity-Manager/services/workspace-air-resource.pdf>

QUESTION 9

An administrator wants to integrate VMware Identity Manager as a Federated Identity Provider for AD FS. Which two steps need to be completed? (Choose two.)

- A. Configure VMware Identity Manager as a Service Provider for AD FS.
- B. Create a VMware Identity Manager claims Provider Trust in AD FS.
- C. Exchange the certificates between Workspace ONE IDM and the domain controllers.
- D. Integrate Workspace ONE federated applications with AD FS.
- E. Redirect mobile users to VMware Identity Manager for authentication.

Correct Answer: AB

QUESTION 10

An administrator receives the following error message:

"404.idp.not.found"

Which authentication method change needs to be completed?

- A. Navigate to the access policy rule settings, then select an authentication method that is passive.
- B. Okta has to be configured as a third-party IDP.
- C. Navigate to the access policy rule setting, then select an authentication method that is active and current.
- D. AD FS has to be configured as a third-party IDP.

Correct Answer: C

2. Initial Stakeholder Interview Findings

In addition to the goals summarized in the previous section, the following are findings from initial interviews with the key stakeholders and an analysis of their service level agreements.

The design must use the F5 Loadbalancer and should be as redundant as possible.

Qualified IT personal is hard to find these days. If possible, reduce operational costs and try to automate or outsource basic IT-tasks.

ACME is very particular about meeting the go-live date. If there are unforeseen delays, the project may not be delivered for the required go-live date.

Which three are physical design requirements in the Workspace ONE UEM design for ACME (Choose three.)

- A. SAAS apps
- B. Devices
- C. Microsoft Storage Spaces
- D. Switches and router
- E. vSphere ESXi hosts
- F. WEB apps

Correct Answer: BCD

QUESTION 12

What are three requirements for a device that is already joined to Azure AD to enroll into Workspace ONE UEM? (Choose three.)

- A. No Azure AD account configured on the device.
- B. Windows 10 OS build 14393.82 and above.
- C. KB update 3176934 installed.
- D. No MDM managed.
- E. User must be a member of the Console Admin Group.
- F. Windows Update services not started.

Correct Answer: BCD

Reference: <https://docs.vmware.com/en/VMware-Workspace-ONE-UEM/1811/Workspace-ONE-UEM-Windows-Desktop-Device-Management/GUID-AWT-ENROLL-AADMANAGED.html>

QUESTION 13

An architect is planning for a cloud-hosted implementation of VMware Identity Manager to integrate with an existing implementation of Workspace ONE UEM. The solution will include the following authentication methods:

Username/Password (Cloud Deployment)

VMware Verify

RADIUS (Cloud Deployment)

Device Compliance

Workspace ONE UEM is also cloud hosted, however, the Active Directory and RADIUS servers are deployed on-premises.

Which two design elements are required to ensure all authentication methods are highly available?

(Choose two.)

- A. IdP Hostname set to load-balancer FQDN
- B. Connectors configured for Legacy Mode
- C. Enable Redirect configured on each Connector
- D. Associate connectors with Build-In IdP
- E. Enable authentication methods on all connectors

Correct Answer: CD

Reference: https://docs.vmware.com/en/VMware-Identity-Manager/services/vidm_cloud_deployment.pdf

QUESTION 14

What are the requirements to configure Kerberos for VMware Identity Manager?

- A. Add the authentication method in Workspace ONE UEM.
- B. Assign the user to the Active Directory group for Kerberos.
- C. Enter the account attribute that contains the SID of the user.
- D. Enable Windows Authentication.

Correct Answer: D
