QUESTION 1

Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure. The network contains three devices.

The devices are configured as shown in the following table.

You need to ensure that Operations Manager can discover all of the devices.

What should you do?

- A. From the Operations Manager console, create one group and set the group to Dynamic Members.
- B. From the Operations Manager console, create two Run As Accounts.
- C. From the Operations Manager Shell, run the Set-SCOMUserRole cmdlet.
- D. From the Operations Manager Shell, run the Enable-SCOMDiscovery cmdlet.

Correct Answer: B

Each SNMPv3 device would need its own run as account. As there are no SNMPv3 devices in the list only v1/v2 we need just one run as account per different community string. As there are two different community strings used for the 3 devices we need two run as accounts. <http://technet.microsoft.com/en-us/library/hh212920.aspx>

QUESTION 2

Your company has a private cloud that is managed by using a System Center 2012 infrastructure.

You plan to deploy a single-tier service to the private cloud.

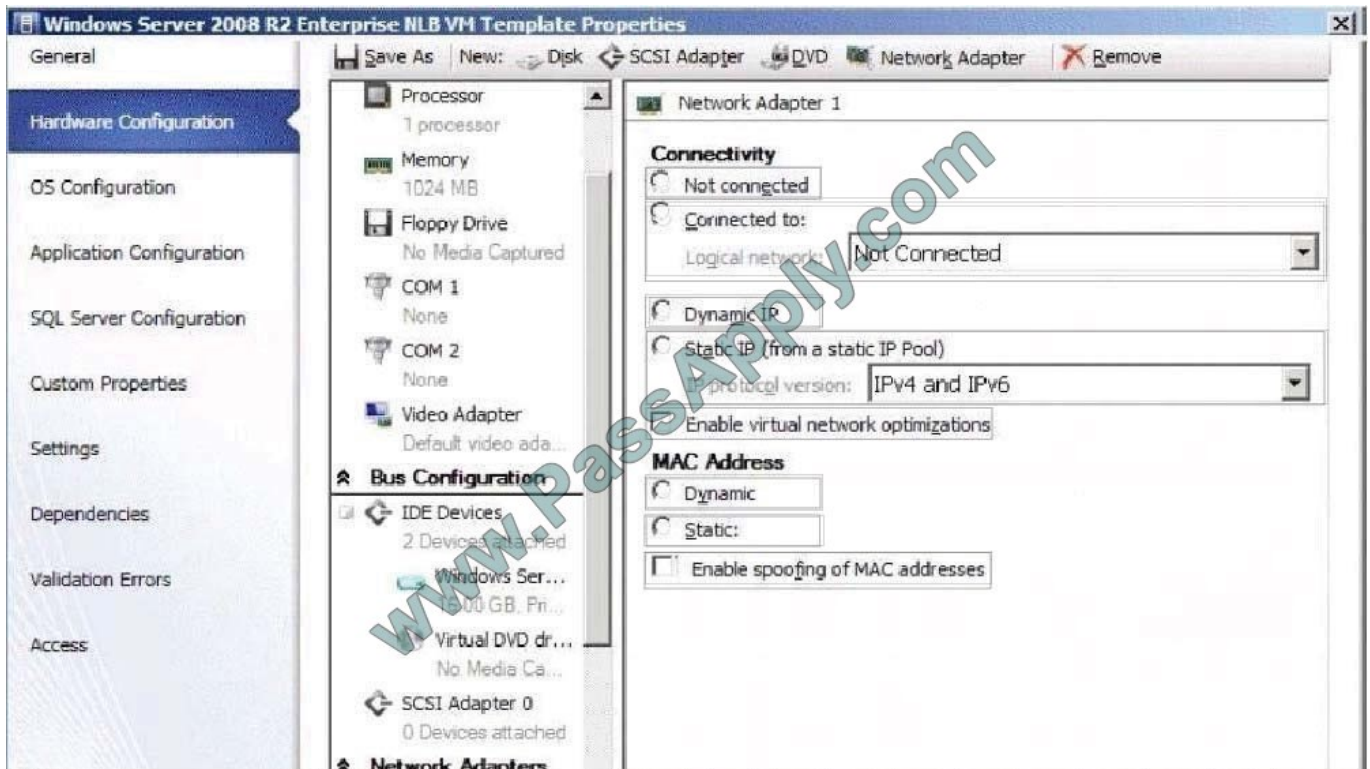

The service is configured to use Network Load Balancing (NLB).

You need to create a Hardware Profile for the virtual machines that will be added to the service template.

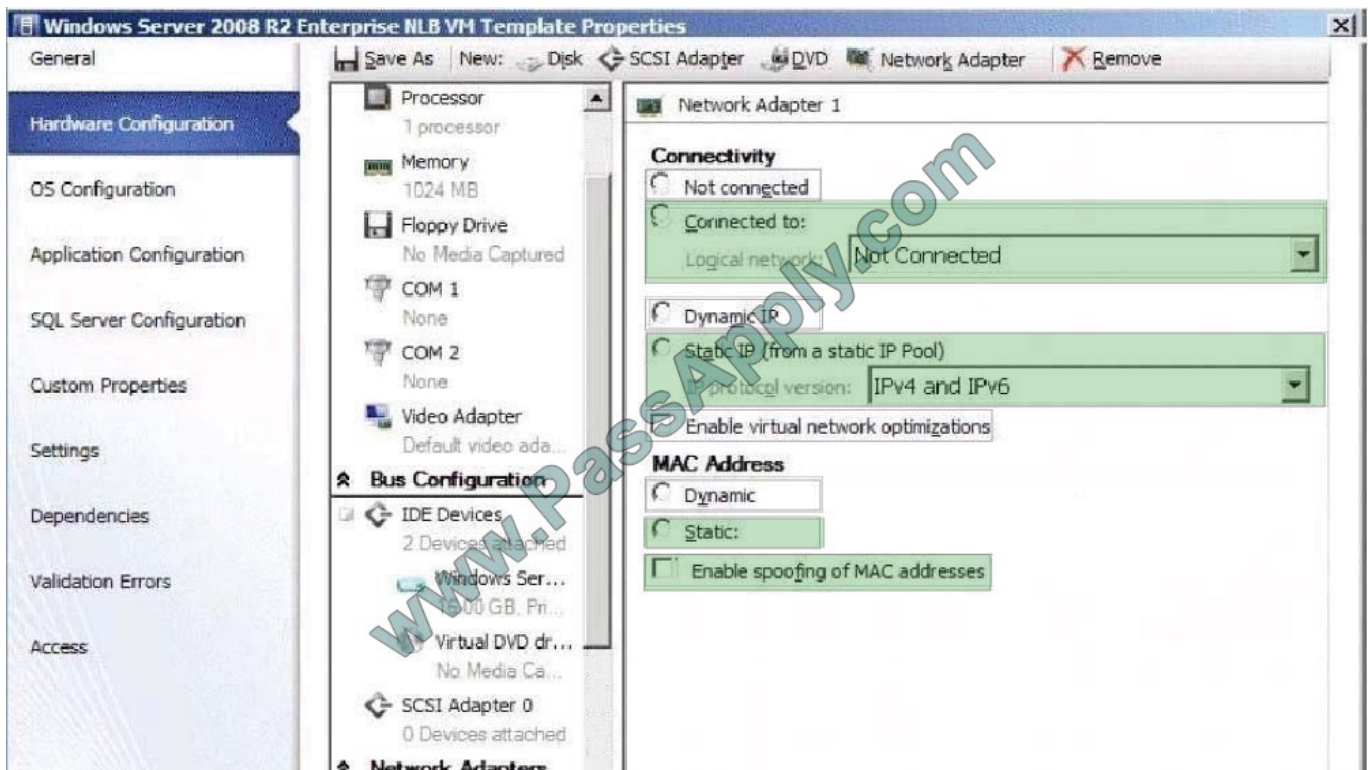

The solution must ensure that the virtual machines will use Windows Network Load Balancing.

Which settings should you configure in the Hardware Profile? To answer, configure the four appropriate settings in the dialog box in the answer area.

Hot Area:

Correct Answer:

QUESTION 3

You need to recommend a solution for the application servers. The solution must meet the technical requirements. What should you create?

- A. A protection group that contains all of the application servers
- B. A protection group that contains all of the Hyper-V hosts
- C. A separate protection group for each application owner
- D. A separate protection group for each application server

Correct Answer: D

QUESTION 4

You need to recommend a solution to meet the technical requirements for MP1.

What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A. Aggregate rollup monitors
- B. Event collection rules
- C. Synthetic transactions
- D. Overrides

Correct Answer: D

QUESTION 5

Your network contains a System Center 2012 R2 Service Manager deployment.

You plan to create priority-based service level objectives (SLOs) for all work item types. The priorities will be assigned automatically based on the urgency and the impact of a work item.

You need to identify how to implement the priorities for each work item.

What should you identify? In the table below, identify which work items can be implemented by using the work item settings or a custom workflow and which work items can be implemented only by using a custom workflow. Make only one

selection in each row.

Hot Area:

Work item	Can be implemented by using the work item settings or a custom workflow	Can be implemented only by using a custom workflow
Activity	<input type="checkbox"/>	<input type="checkbox"/>
Change Request	<input type="checkbox"/>	<input type="checkbox"/>
Incident	<input type="checkbox"/>	<input type="checkbox"/>
Problem	<input type="checkbox"/>	<input type="checkbox"/>
Release	<input type="checkbox"/>	<input type="checkbox"/>
Service Request	<input type="checkbox"/>	<input type="checkbox"/>

Correct Answer:

Work item	Can be implemented by using the work item settings or a custom workflow	Can be implemented only by using a custom workflow
Activity	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Change Request	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Incident	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Problem	<input checked="" type="checkbox"/>	<input type="checkbox"/>
Release	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Service Request	<input type="checkbox"/>	<input checked="" type="checkbox"/>

QUESTION 6

Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure.

The network contains two network segments that are separated by a firewall.

You have a management server named Server1.

You create a discovery rule and configure the rule to discover SNMP devices.

You discover that only the devices on the network segment that contains Server1 are discovered.

You need to ensure that the devices supporting SNMP on both network segments are discovered.

Which firewall port or ports should you allow on the firewall?

- A. UDP 161
- B. TCP 161 and UDP 22
- C. UDP 5723 and UDP 5724
- D. TCP 162

Correct Answer: A

SNMP uses the default UDP port 161 for general SNMP messages and UDP port 162 for SNMP trap messages.
<http://technet.microsoft.com/en-us/library/cc959643.aspx>

QUESTION 7

Your company has a private cloud that is managed by using a System Center 2012 Operations Manager infrastructure.

The network contains two servers named Server1 and Server2 that run Windows Server 2008 R2.

The private cloud contains two servers. The servers are configured as shown in the following table.

Server name	Configuration	Network segment name
Server1	Audit Collection Services (ACS) collector	Network1
Server2	Audit Collection Services (ACS) forwarder	Network2

The network segments are separated by a firewall. All of the TCP ports from 1 to 1024 are allowed on the firewall.

You need to ensure that Server2 can send security events to Server1. What should you do?

- A. From the firewall, allow TCP 5723 from Network2 to Network1.
- B. Deploy an Operations Manager gateway server.
- C. From the firewall, allow TCP 51909 from Network2 to Network1.
- D. From the firewall, allow TCP 51909 from Network1 to Network2.

- E. Deploy an SMTP smart host.
- F. From the firewall, allow TCP 5723 from Network1 to Network2.

Correct Answer: C

ACS Forwarders Separated from the ACS Collector by a Firewall Because of the limited communication between an ACS forwarder and an ACS collector you only need to open the inbound TCP port 51909 on a firewall to enable an ACS forwarder, separated from your network by a firewall, to reach the ACS collector. <http://technet.microsoft.com/en-us/library/bb309575.aspx>

QUESTION 8

Your company has a private cloud that contains a System Center 2012 Service Manager infrastructure.

You need to create a service level objective (SLO) for incidents that have a priority value of 1.

What should you create first?

- A. A service offering
- B. A service template
- C. A subscription
- D. A queue

Correct Answer: D

QUESTION 9

Your company has a private cloud that is managed by using a System Center 2012 infrastructure. The Service Manager management server is installed on a server named Server1. The Configuration Manager site server is installed on a server named Server2.

You create a baseline and several configuration items.

You need to configure Service Manager to create incidents for each Service Manager configuration item that is non-compliant with the baseline.

What should you create?

- A. A connector and a Desired Configuration Management Event Workflow
- B. A channel and a subscription
- C. A subscription, a connector, and a task
- D. A task and a Desired Configuration Management Event Workflow

Correct Answer: A

A connector is required to bring data from Configuration Manager into Service Manager. From there, you create a Desired Configuration management Event Workflow. Using Connectors to Import Data into System Center 2012 - Service Manager <http://technet.microsoft.com/en-us/library/hh524326.aspx> How to Configure Desired Configuration Management to Generate Incidents <http://technet.microsoft.com/enus/library/hh495577.aspx>

QUESTION 10

You need to identify the information that is required to discover each switch by using an explicit discovery.

Which information do you require for each switch? (Each correct answer presents part of the solution. Choose all that apply.)

- A. The IP address
- B. The MAC address
- C. The management credentials
- D. The SNMP community string

Correct Answer: AC

QUESTION 11

You need to recommend a solution to remediate the Exchange Server 2010 service failures. The solution must meet the technical requirements. What should you include in the recommendation?

- A. Create a service request workflow that triggers a dependent activity.
- B. Create an incident event workflow that triggers a dependent activity.
- C. Create an incident event workflow that triggers a runbook activity.
- D. Create a service request workflow that triggers a runbook activity.

Correct Answer: C

QUESTION 12

You have a System Center 2012 R2 infrastructure that contains three servers. The servers are configured as shown in the following table.

Server name	Component
Server1	Service Manager
Server2	Orchestrator
Server3	Virtual Machine Manager (VMM)

You need to create a self-service request offering that will allow users to provision new virtual machines.

On which server should you perform each of the following actions? To answer, select the appropriate server for each action in the answer area.

Hot Area:

Answer Area

Create a connector.

Server1
Server2
Server3

Install the Virtual Machine Manager console.

Server1
Server2
Server3

Deploy the System Center Integration Pack for System Center 2012 R2 Virtual Machine Manager (VMM).

Server1
Server2
Server3

Correct Answer:

Answer Area

Create a connector.

Server1
Server2
Server3

Install the Virtual Machine Manager console.

Server1
Server2
Server3

Deploy the System Center Integration Pack for System Center 2012 R2 Virtual Machine Manager (VMM).

Server1
Server2
Server3
