QUESTION 1

Your network contains multiple servers that run Windows Server 2012.

The network contains a Storage Area Network (SAN) that only supports Fibre Channel connections.

You have two failover clusters. The failover clusters are configured as shown in the following table.

Failover cluster name	Role	Members
Cluster1	File Services	Two nodes
Cluster2	Hyper-V hosting	Six nodes

Only the members of Cluster1 can connect to the SAN.

You plan to implement 15 highly available virtual machines on Cluster2. All of the virtual machines will be stored in a single shared folder.

You need to ensure that the VHD files of the virtual machines can be stored on the SAN.

What should you do? (Each correct answer presents a complete solution. Choose all that apply.)

- A. From a node in Cluster2, create a Virtual Fibre Channel SAN.
- B. From a node in Cluster1, create a Virtual Fibre Channel SAN.
- C. From Cluster1, add the iSCSI Target Server cluster role.
- D. From Cluster1, configure the clustered File Server role of the File Server for scale-out application data type.

Correct Answer: AD

QUESTION 2

Your company has a human resources department, a finance department, a sales department and an RandD department.

The company audits the access of documents that contain department-specific sensitive information.

You are planning an administrative model for the departments to meet the following requirements:

Provide RandD managers with the ability to back up all the files of their department only.

Provide finance managers with the ability to view the audit logs for the files of their department only.

Provide human resources managers with the ability to view the audit logs for the files of their department only.

Provide sales managers with the ability to modify the NTFS permissions on all the shared folders of their department only.

You need to identify the minimum amount of file servers required on the network to meet the requirements of each department.

How many file servers should you identify?

- A. 1
- B. 2
- C. 3
- D. 4

Correct Answer: C

QUESTION 3

You manage a Hyper-V 2012 cluster by using System Center Virtual Machine Manager 2012 SP1. You need to ensure high availability for business-critical virtual machines (VMs) that host business-critical SQL Server databases.

Solution: You create a custom placement rule and apply it to all business-critical VMs. Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

QUESTION 4

Your network contains the following roles and applications:

Microsoft SQL Server 2012

File and Storage Services

Active Directory Domain Services (AD DS)

Active Directory Certificate Services (AD CS)

Web Server (IIS)

You plan to deploy Active Directory Federation Services (AD FS).

You need to identify which deployed services or applications can be used as attribute stores for the planned AD FS deployment. What should you identify? (Each correct answer presents a complete solution. Choose all that apply.)

- A. File and Storage Services
- B. AD CS

C. Microsoft SQL Server 2012

D. IIS

E. AD DS

Correct Answer: CE

QUESTION 5

Your network contains an Active Directory domain named contoso.com.

You plan to implement Microsoft System Center 2012.

You need to identify which solution automates the membership of security groups for contoso.com. The solution must use workflows that provide administrators with the ability to approve the addition of members to the security groups.

Which System Center 2012 roles should you identify?

A. Configuration Manager and Orchestrator

B. Service Manager and Virtual Machine Manager (VMM)

C. Orchestrator and Service Manager

D. Operations Manager and Orchestrator

E. Service Manager and Operations Manager

F. Orchestrator and Virtual Machine Manager (VMM)

G. Configuration Manager and Virtual Machine Manager (VMM)

Correct Answer: C

QUESTION 6

You need to implement a new highly available storage solution for the Hyper-V environment. Which servers should you include in the scale-out file cluster?

A. CHI-SERVER1 and CHI-SERVER2

B. SEA3-HVNODE1 and SEA3-HVNODE2

C. SEA-SERVER1 and SEA-SERVER2

D. CHII-HVNODE1 and CHI1-HVNODE2

Correct Answer: B

QUESTION 7

You implement cross-forest enrollment between Contoso.com and Fabrikam.com.

You receive version errors when you deploy updated certificates from the Contoso domain to the Fabrikam domain.

You need to ensure that you can deploy the certificates to the fabrikam.com domain.

What should you do?

- A. Run the following Windows PowerShell script: `DumpADObj.ps1 -ForestName fabrikam.com`
- B. Run the following Windows PowerShell script: `PKISync.ps1 -sourceforest contoso.com -targetforest fabricam.com -f`
- C. Run the following Windows PowerShell command: `Get-CertificationAuthority contoso.com | Get-PendingRequest | Approve-CertificateRequest`
- D. Run the following Windows PowerShell command: `Get-CertificationAuthority -Name contoso.com | Get-PolicyModuleFlag | Enable-PolicyModuleFlagEnableOCSPRevNoCheck, DisableExtensionList -RestartCA`

Correct Answer: A

In cross-forest Active Directory Certificate Services (AD CS) deployments, use `DumpADObj.ps1` to troubleshoot certificate enrollment or PKI object synchronization problems. References: [https://technet.microsoft.com/en-us/library/ff961505\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/ff961505(v=ws.10).aspx)

QUESTION 8

You need to recommend an automated remediation solution for the `ReliableTimeSource` registry value.

The solution must meet the technical requirements.

What should you include in the recommendation?

- A. A System Center 2102 Configuration Manager configuration baseline.
- B. A System Center 2012 Operations Manager performance counter rule.
- C. A System Center 2012 Configuration Manager maintenance task.
- D. A System Center 2012 Operations Manager event rule.

Correct Answer: A

Business Requirements	Technical Requirements	Virtualization Requirements	All
	<p>The company identifies the following technical requirements:</p> <ul style="list-style-type: none">Provide a highly available DHCP solution.Maintain a central database that contains the security events from all of the servers. The database must be encrypted.Ensure that an administrator in the main office can manage the approval of Windows updates and updates to third-party applications for all of the users.Ensure that all of the domain controllers have the ReliableTimeSource registry value in HKEY_LOCAL_MACHINE\SYSTEM\CurrentControlSet\Services\W32Time\Parameters set to 1, even if an administrator changes that value manually. <p>• View configuration baselines that have been deployed to the client, initiate compliance evaluation, and view compliance reports.</p>

QUESTION 9

You have an Active Directory domain named adatum.com. The domain contains a Microsoft System Center 2012 infrastructure. All servers run Windows Server 2012.

You have a server named VMM1 that has Virtual Machine Manager (VMM) installed. VMM1 manages 15 Hyper-V hosts.

You deploy a Windows Server Update Services (WSUS) server named WSUS1.

You need to automate the remediation of non-compliant Hyper-V hosts. The solution must minimize the amount of time that virtual machines are unavailable.

What should you do first?

- A. Configure the Hyper-V hosts to download Windows updates from WSUS1 by using a Group Policy object (GPO).
- B. Install the WSUS Administration console on VMM1, and then add WSUS1 to the fabric.
- C. Install the Virtual Machine Manager console on WSUS1, and then add WSUS1 to the fabric.
- D. Configure the Hyper-V hosts to download Windows updates from VMM1 by using a Group Policy object (GPO).

Correct Answer: B

QUESTION 10

You need to recommend a solution to maintain a copy of App2. The solution must meet the application requirements and must minimize additional hardware purchases. What should you include in the recommendation?

- A. Single-site Failover Clustering
- B. Hyper-V replicas

- C. Multi-site Failover Clustering
- D. Distributed File System (DFS) Replication

Correct Answer: B

Explanation/Reference:

Overview	Existing Environment Network Infrastructure	Current Issues	Application Requirement:
<p>The company is developing an application named Appl. App1 is a multi-tier application that will be sold as a service to customers.</p> <p>Each instance of App1 is comprised of the following three tiers:</p> <ul style="list-style-type: none"> - A web front end - A middle tier that uses Windows Communication Foundation (WCF) - A Microsoft SQL Server 2008 R2 database on the back end <p>Each tier will be hosted on one or more virtual machines. Multiple-tiers cannot coexist on the same virtual machine.</p> <p>When customers purchase App1, they can select from one of the following service levels:</p> <ul style="list-style-type: none"> - Standard: Uses a single instance of each virtual machine required by Appl. If a virtual machine becomes unresponsive, the virtual machine must be restarted. - Enterprise: Uses multiple instances of each virtual machine required by App1 to provide high-availability and fault tolerance. <p>All virtual hard disk (VHD) files for App1 will be stored in a file share. The VHDs must be available if a server fails.</p> <p>You plan to deploy an application named App2. App2 is comprised of the following two tiers:</p> <ul style="list-style-type: none"> - A web front end - A dedicated SQL Server 2008 R2 database on the back end <p>App2 will be hosted on a set of virtual machines in a Hyper-V cluster in the Miami office. The virtual machines will use dynamic IP addresses. A copy of the App2 virtual machines will be maintained in the Seattle office.</p> <p>App2 will be used by users from a partner company named Trey Research. Trey Research has a single Active Directory domain named treyresearch.com. Treyresearch.com contains a server that has the Active Directory Federation Services server role and all of the Active Directory Federation Services (AD FS) role services installed.</p>			

▲ Role/Feature description

Hyper-V Replica provides asynchronous replication of Hyper-V virtual machines between two hosting servers. It is simple to configure and does not require either shared storage or any particular storage hardware. Any server workload that can be virtualized in Hyper-V can be replicated. Replication works over any ordinary IP-based network, and the replicated data can be encrypted during transmission. Hyper-V Replica works with standalone servers, failover clusters, or a mixture of both. The servers can be physically co-located or widely separated geographically. The physical servers do not need to be in the same domain, or even joined to any domain at all.

QUESTION 11

Your network contains an Active Directory domain named contoso.com. The domain contains two domain controllers named DC1 and DC2. The domain contains a server named Server1.

Server1 is a certification authority (CA). All servers run Windows Server 2012 R2.

You plan to deploy BitLocker Drive Encryption (BitLocker) to all client computers. The unique identifier for your

organization is set to Contoso.

You need to ensure that you can recover the BitLocker encrypted data by using a BitLocker data recovery agent. You must be able to perform the recovery from any administrative computer.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Request the new certificate and export the certificate as a .pfx file.	
Deploy the data recovery agent by using a Group Policy object (GPO).	
Install BitLocker on Server1.	
Copy the Basic EFS certificate template, modify the new template, and then publish the new template.	
Request the new certificate and export the certificate as a .cer file.	
Install BitLocker on a domain controller.	

Correct Answer:

Actions	Answer Area
Request the new certificate and export the certificate as a .pfx file.	Install BitLocker on a domain controller.
	Copy the Basic EFS certificate template, modify the new template, and then publish the new template.
Install BitLocker on Server1.	Request the new certificate and export the certificate as a .cer file.
	Deploy the data recovery agent by using a Group Policy object (GPO).

QUESTION 12

You need to create a service template for the web servers used by the CRM application. What should you include in the

service template?

- A. A VIP template
- B. A host profile
- C. Guest OS profile
- D. A capability profile

Correct Answer: A
