QUESTION 1

You need to recommend a solution to distribute sessions to the RD Session Host servers. The solution must meet the technical requirements. What should you recommend?

- A. On the RD Session Host servers, install and configure the Windows System Resource Manager feature.
- B. On the RD Connection Broker servers, configure the deployment properties.
- C. On the RD Web Access servers, modify the Web.config file located in %Systemroot%\Web\RDWeb\Pages.
- D. On the RD Connection Broker servers, configure the collection

Correct Answer: D

QUESTION 2

Your network contains servers that run Windows Server 2012 and client computers that run Windows 7. All of the client computers run a standard image of Windows 7.

The network has Microsoft Application Compatibility Toolkit (ACT) 6.0 deployed.

The network contains three computers. The computers are configured as shown in the following table.

Computer name	Function
Client1	Windows 7 production client
Client2	Windows 8 test client
Server1	ACT Log Processing Service ACT Log Processing Service share ACT database

You plan to upgrade all of the client computers to Windows 8.

You need to identify whether an application named App1 can run on Windows 8.

What should you deploy?

- A. An inventory-collector package to Client2
- B. An inventory-collector package to Client1
- C. A runtime-analysis package to Client1
- D. A runtime-analysis package to Client2

Correct Answer: D

QUESTION 3

Your network contains an Active Directory domain named contoso.com. All client computers run Windows 8 Enterprise. You plan to deploy Hyper-V to the client computers.

You need to identify which hardware features the client computers must support to enable the Client Hyper-V feature.

What should you identify? (Each correct answer presents part of the solution. Choose all that apply.)

- A. Hardware-assisted virtualization
- B. Hardware-enforced Data Execution Prevention (DEP)
- C. Multipath I/O (MPIO)
- D. Non-uniform memory access (NUMA)
- E. Second Level Address Translation (SLAT)

Correct Answer: ABE

QUESTION 4

You need to recommend a solution to ensure that the App-V applications are available to the research users. The solution must meet the technical requirements. What should you include in the recommendation?

- A. Deploy the App-V publishing server to the Miami office.
- B. Store the App-V database on the \\Contoso.com\Shared\Data share.
- C. Deploy the App-V management server to the Miami office.
- D. Store the App-V packages on the \\Contoso.com\Shared \Data share.

Correct Answer: B

QUESTION 5

You need to configure the virtualized applications to ensure that they download fully before they can run on the client computers. What should you use?

- A. Microsoft System Center 2012 App Controller
- B. The App-V Sequencer
- C. Microsoft System Center 2012 Virtual Machine Manager (VMM)

D. The Application Virtualization Management Console

Correct Answer: B

QUESTION 6

Your network contains an Active Directory domain named adatum.com. The domain contains a server named Server1 that runs Windows Server 2012.

You need to prevent all of the applications that run on Server1 from running code from non-executable memory regions.

What should you do?

- A. From the local Group Policy, create an application control policy.
- B. From BCDEdit, modify the Data Execution Prevention (DEP) settings.
- C. From Windows PowerShell, run the Set-ExecutionPolicy cmdlet.
- D. From the local Group Policy, create a software restriction policy.

Correct Answer: B

QUESTION 7

Your network contains an Active Directory domain named contoso.com.

You deploy Remote Desktop Services (RDS) and publish multiple RemoteApp programs. You need to ensure that users can subscribe to the RemoteApp and Desktop Connections feed by using their email address.

Which resource record type should you add to the DNS zone? To answer, select the appropriate resource record type in the answer area.

Hot Area:

Resource Record Type

Select a resource record type:

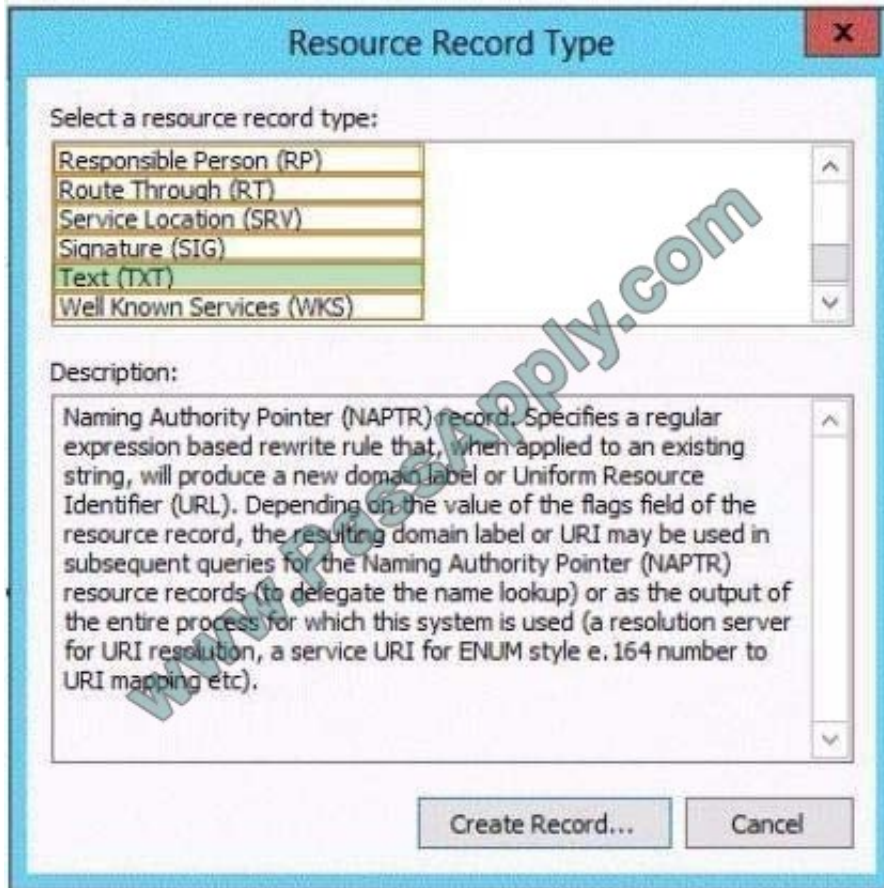

- Responsible Person (RP)
- Route Through (RT)
- Service Location (SRV)
- Signature (SIG)
- Text (TXT)
- Well Known Services (WKS)

Description:

Naming Authority Pointer (NAPTR) record. Specifies a regular expression based rewrite rule that, when applied to an existing string, will produce a new domain label or Uniform Resource Identifier (URL). Depending on the value of the flags field of the resource record, the resulting domain label or URI may be used in subsequent queries for the Naming Authority Pointer (NAPTR) resource records (to delegate the name lookup) or as the output of the entire process for which this system is used (a resolution server for URI resolution, a service URI for ENUM style e. 164 number to URI mapping etc).

Create Record... Cancel

Correct Answer:

<http://technet.microsoft.com/en-us/library/hh831442.aspx>

To configure DNS feed lookup for RemoteApp and Desktop Connection Log on to the domain controller as the CORP\Administrator user account. On the domain controller, open DNS Manager. Click Start, type DNS, and then click DNS.

Right-click the forward lookup zone where you want to create the TXT record, and then click Other New Records.

Click Text (TXT), and then click Create Record.

In the Record name (use parent domain if left blank) box, type `_msradc`. In the Text box, type `https://RDWA1.corp.contoso.com/RDWeb/Feed`.

Click OK.

QUESTION 8

Your network contains an Active Directory domain named contoso.com. The domain contains an application virtualization infrastructure. The infrastructure contains three servers. The servers are configured as shown in the following table.

Servername	Configuration
Server1	Microsoft Application Virtualization (App-V) 5.0 management server
Server2	Microsoft Application Virtualization (App-V) 5.0 publishing server
Server3	Microsoft SQL Server 2012

You discover that it can take up to 10 minutes for newly published packages to be available from client computers.

You need to recommend a solution to ensure that App-V 5.0 packages are available to the client computers within two minutes of being published.

What should you include in the recommendation?

- A. Modifications to the Web.config file stored on Server1
- B. A scheduled task that runs the Get-AppVServerPackage cmdlet on Server1
- C. A scheduled task that runs the Get-AppVServerPackage cmdlet on Server2
- D. Modifications to the Web.config file stored on Server2

Correct Answer: C

QUESTION 9

You need to meet the application requirements for administering the App-V infrastructure. What should you install on Server1?

- A. The Microsoft Visual C++ 2010 Redistributable Package
- B. Microsoft SQL Server Native Client
- C. Microsoft .NET Framework 4.5
- D. Microsoft Silver light

Correct Answer: D

<http://technet.microsoft.com/en-us/library/jj713458.aspx>

Management console requires Silverlight, Visual C++2010 SP1, and .Net 4.0.

QUESTION 10

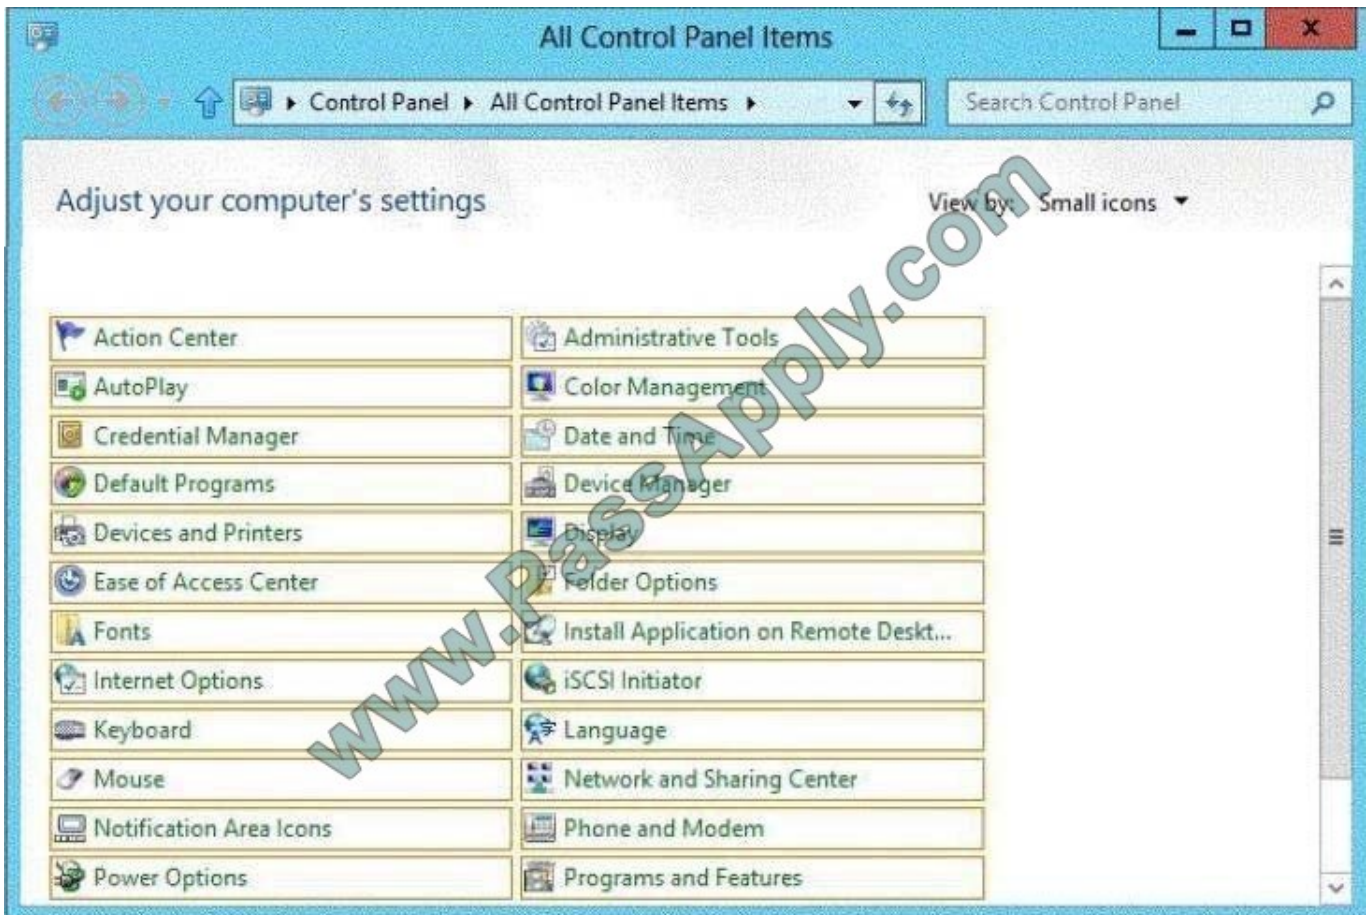

You deploy several RemoteApp programs.

You need to identify which file extensions on a client computer are associated with the RemoteApp programs.

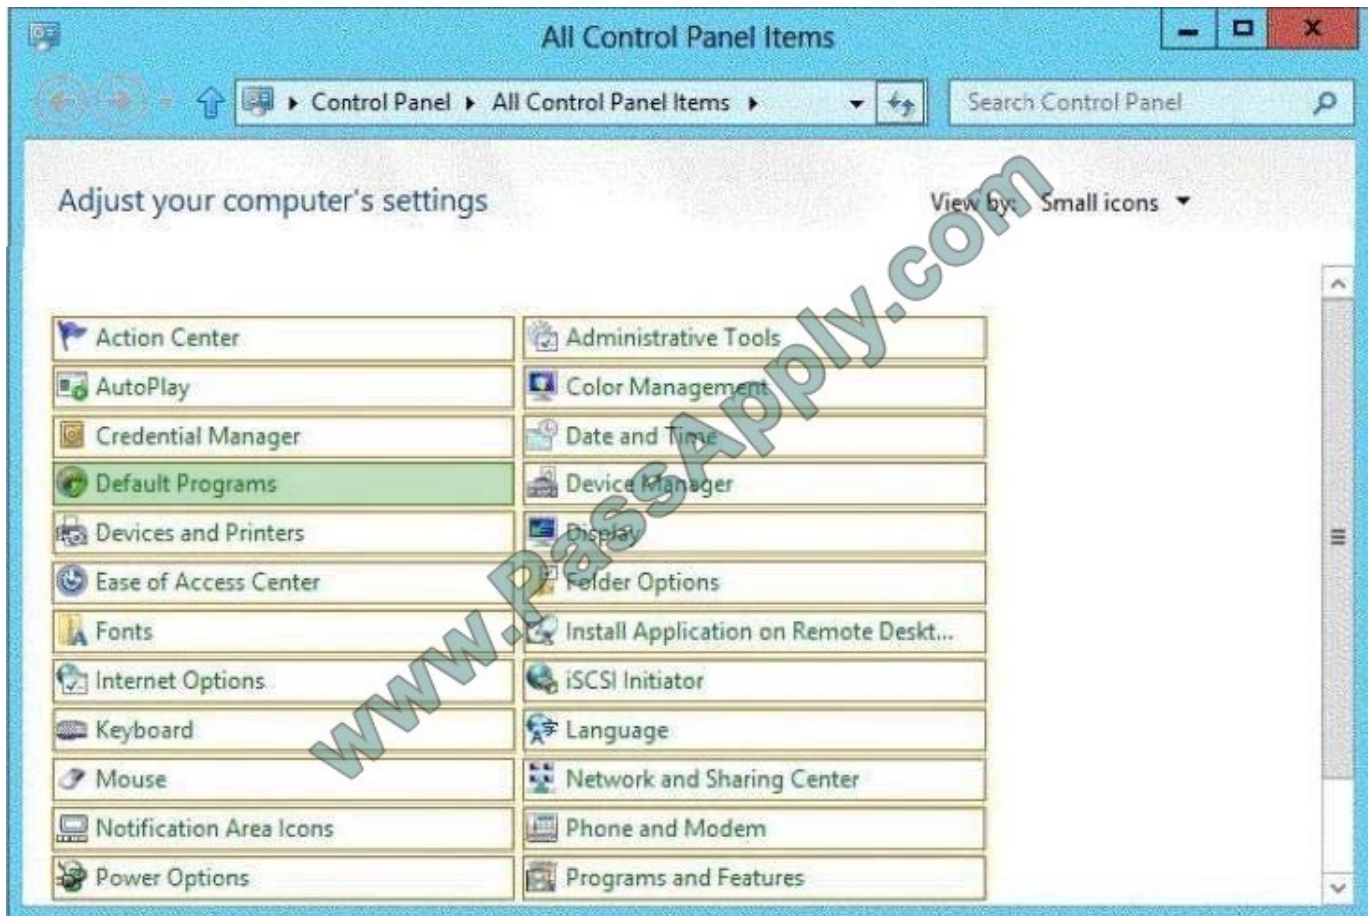

Which Control Panel item should you use? To answer, select the appropriate object in the answer area.

Hot Area:

Correct Answer:

QUESTION 11

Your company plans to implement a monitoring solution for application licenses.

The corporate management policy states that all newly deployed technologies must be cloud-based.

You need to recommend a license monitoring solution that meets the management policy.

Which license monitoring solution should you recommend? More than one answer choice may achieve the goal. Select the BEST answer.

- A. The Microsoft Asset Inventory Service (AIS)
- B. Asset Intelligence in Microsoft System Center 2012 Configuration Manager
- C. The Microsoft License Statement tool
- D. The Microsoft Assessment and Planning (MAP) Toolkit

Correct Answer: A

QUESTION 12

Your network contains servers that run Windows Server 2012 and client computers that run Windows 8.

You have a standard company image named Image.wim that contains a third-party application named Appl. Image.wim only contains one image. App1 uses a dynamic link library (DLL) file stored in C:\AppData.

A new version of App1 named App2 is available.

You need to update the DLL file in Image.wim. You want to achieve this goal by using the minimum amount of administrative effort.

Which three actions should you perform? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions	Answer Area
Run <code>dism.exe /unmount-wim /mountdir:c:\mount /commit.</code>	
Run <code>dism.exe /mount-wim /wimfile:image.wim /index:1 /mountdir:c:\mount.</code>	
Copy the new DLL of App1 to C:\AppData.	
Copy the new DLL of App1 to C:\Mount\AppData.	
Run <code>dism.exe /online /add-package:app2.dll.</code>	
Run <code>dism.exe /mount-wim /wimfile:image.wim /index:1 /mountdir:c:\.</code>	

Correct Answer:

Actions	Answer Area
	<pre>Run dism.exe /mount-wim /wimfile:image.wim /index:1 /mountdir:c:\mount.</pre>
	<pre>Copy the new DLL of App1 to C:\Mount\AppData.</pre>
<pre>Copy the new DLL of App1 to C:\AppData.</pre>	<pre>Run dism.exe /unmount-wim /mountdir:c:\mount /commit.</pre>
<pre>Run dism.exe /online /add-package:app2.dll.</pre>	
<pre>Run dism.exe /mount-wim /wimfile:image.wim /index:1 /mountdir:c:\.</pre>	

A mount directory needs to be created before mounting an image. You would not mount an image to the root of c. Also the question only asks you to update the dll and the image isn't online.
