### QUESTION 1

You are designing an ASP.NET Web application. Pages of the Web application will share a common layout. Different business logic will be executed based on user input. You have the following requirements:

Use view state to maintain data between postbacks.

Reuse presentation logic across multiple pages.

You need to recommend an approach that meets the requirements. What should you recommend?

A.

Use ASP.NET MVC 2.

B.

Use an ASP.NET Web Forms-based framework.

C.

Use an ASP.NET Web Services application.

D.

Use ASP.NET AJAX.

Correct Answer: B

---

### QUESTION 2

You are designing an ASP.NET Web application.

The Web application uses a Menu control to display either a menu of public and private pages to authorized users or a menu of only public pages to visitors.

You need to ensure that the menu options and URLs of the private pages are not available to unauthorized users.

Which approach should you recommend?

A. Use the Page\_Init method to add to the Menu control only pages that the user is authorized to view

B. Use the Page\_Load method to add to the Menu control only pages that the user is authorized to view

C. Use a JavaScript window.onload event handler to hide the private pages from the list of pages shown on the menu

D. Use a JavaScript document ready event handler to hide the private pages from the list of pages shown on the menu

Correct Answer: B

---

### QUESTION 3

You need to design an automation solution for the final-release build process. Which approach should you recommend?

- A. Use Web application configuration file transforms.
- B. Create a custom configuration section for each build configuration value.
- C. Append the Config Source attribute to each application configuration section.
- D. Duplicate each configuration section for the debug build configuration, and modify the settings for the release build configuration.

Correct Answer: A

---

### QUESTION 4

You are designing an ASP.NET Web application.

The Web application must instruct proxy servers between the server and the browser to not cache content. You need to recommend an approach for instructing the proxy servers.

What should you recommend?

- A. Use the `Response.Cache.SetVaryByCustom()` method with a value of no-proxy.
- B. Use the `Response.Cache.SetCacheability()` method with a value of `HttpCacheability.ServerAndPrivate`.
- C. Use the `Response.Cache.AppendCacheExtension()` method with a value of no-proxy.
- D. Use the `Response.Cache.SetNoTransforms()` method.

Correct Answer: B

---

### QUESTION 5

You are designing an ASP.NET MVC 2 application.

You need to centralize the logic for handling and logging unhandled exceptions.

Which approach should you recommend?

- A. Use try and catch on every method.
- B. Override the `One Exception` method of each controller.
- C. Decorate all controllers with a custom `Handle Error` attribute
- D. Decorate all controllers with the default `Handle Error` attribute,

Correct Answer: C

---

#### QUESTION 6

During application testing, developers notice that the TempData property contents no longer persist between requests.

You need to advise the developers of the requirements for ensuring that the TempData property contents persist between requests.

Which should you advise?

- A. ViewState must be enabled at the page level.
- B. SessionState must be enabled in the Web application configuration.
- C. InProc session state must be enabled in the Web application.
- D. ViewState must be enabled in the Web application configuration.

Correct Answer: C

---

#### QUESTION 7

An ASP.NET Web application hosted on a remote server throws NullReferenceException exceptions that are not handled. The stack trace does not include line numbers. The Microsoft Visual Studio 2010 remote debugging tools are installed on the remote server. You need to recommend an approach for identifying the line of code that is causing the exception.

What should you recommend?

- A. Deploy the PDB files for the assemblies to the remote server. Inspect the Application event log.
- B. Set the project-level Enable Code Analysis on Build property to true. Inspect the Application event log.
- C. In the Web.config file, set the debug value to true. Attach the debugger to the remote worker process.
- D. Set the project-level Optimize code property to false. Attach the debugger to the remote worker process.

Correct Answer: A

---

#### QUESTION 8

You are designing an ASRNET Web application that allows users to specify a file to be uploaded by entering the URL of the file. Only files that contain information in a specific internal metadata field are allowed. You need to design a solution to reject URLs of disallowed files. Which two approaches could you recommend? (Each correct answer presents a complete solution. Choose two.)

- A. Use an On Click method.

- B. Use an on Submit Java Script handler.
- C. Use a Regular Expression Validator control.
- D. Use a custom validator control.

Correct Answer: AD

---

#### QUESTION 9

You are designing an ASP.NET Web application for content management. You have the following requirements:

Support multiple languages.

Support dynamic changes to site content.

Provide the ability to add content to the site without making changes to files within the application directory.

You need to recommend the application's source for retrieving content. Which source should you recommend?

- A. a database based on CurrentUICulture
- B. a master page based on CurrentUICulture
- C. local resources based on CurrentCulture
- D. global resources based on CurrentCulture

Correct Answer: A

---

#### QUESTION 10

You are designing an ASP.NET Web application that will queue e-mail messages in a database. A Windows service will process the queue and send the messages.

The Web application will be hosted on a server that hosts several other applications.

The server cannot support additional processors or memory.

You estimate that the Web application usage will increase by 10 percent every month. You need to ensure that the delivery of high-priority messages will not be delayed as the Web application usage increases.

Which two actions should you recommend? (Each correct answer presents part of the solution. Choose two.)

- A. Process the high-priority messages first.
- B. Use a shared memory connection to the database.
- C. Modify the Windows service to handle multiple threads.
- D. Run the Windows service on a server that is separate from the Web application host server.

Correct Answer: AD

---

#### QUESTION 11

You are designing an ASP.NET Web Forms application. The Web application has a heavy reliance on view state.

You are designing the Web application for use in regions that have limited or low-bandwidth connectivity.

You have the following requirements:

Decrease bandwidth requirements.

Prevent any user from obtaining any part of the view state.

Do not require changes to existing pages, user controls, or code-behind files that rely on the view state.

You need to ensure that the Web application meets these requirements.

Which approach should you recommend?

A.

Configure IIS to use SSL.

B.

Configure IIS to use HTTP compression.

C.

Register a custom PageAdapter class that stores the view state in a cookie.

D.

Register a custom PageAdapter class that provides a SessionStatePagePersister.

Correct Answer: D

---

#### QUESTION 12

You need to design a solution for the protection of the pages in the Secured folder. Which approach should you recommend?

A. Use Code Access Security.

B. Use the Personalization API.

C. Use Software Restriction Policies.

D. Use the Authorization element of web.config.

Correct Answer: D
