QUESTION 1

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while

others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You need to ensure that moderators can be added to the system.

Which authentication approach should you use?

- A. Microsoft Office 365 directory
- B. Azure AD self-service signup
- C. Azure AD Organizational Units (OU)
- D. Active Directory Federation

Correct Answer: C

QUESTION 2

You are designing a Windows Azure application.

The application will store data in Windows Azure Blob storage.

Many of the application services will be interdependent.

You need to recommend an approach for optimizing the performance of the application.

What should you recommend?

- A. Create one affinity group. Associate only the storage services with the affinity group.
- B. Create one affinity group. Associate only the compute services with the affinity group.
- C. Create one affinity group. Associate the compute services and storage services with the affinity group.
- D. Create two affinity groups. Associate the compute services with one group and the storage services with the other group.

Correct Answer: C

Use the following procedures to create an affinity group, which can be used to direct Windows Azure storage accounts and hosted services to the same geographical grouping within a specified region. Each affinity group is associated with a

Windows Azure subscription, and can be used by multiple storage accounts and hosted services for that subscription.

Affinity groups can be created and managed by the service administrator and coadministrators for a subscription.

QUESTION 3

Which of the following describes what is meant by the ITIL Service Strategy component?

- A. Defining processes required to manage the solution.
- B. Designing the solution to the ITIL specifications.
- C. Ensuring changes are designed to meet customer expectations.
- D. Understanding the intended customer and what services are required.

Correct Answer: D

The objective of ITIL Service Strategy is to decide on a strategy to serve customers. Starting from an assessment of customer needs and the market place, the Service Strategy lifecycle stage determines which services the IT organization is to offer and what capabilities need to be developed. Its ultimate goal is to make the IT organization think and act in a strategic manner.

QUESTION 4

You need to create an Azure Function to run the Daily Sponsor Report. Which function template should you use?

- A. TimerTrigger
- B. HTTPTrigger
- C. ServiceBusQueueTrigger
- D. EventHubTrigger

Correct Answer: A

Explanation

QUESTION 5

You are designing a Windows Azure application.

The application includes a web role and a worker role that communicate by using a Windows Azure Queue. The worker role processes each message within 10 seconds of retrieving it from the queue. The worker role must process each message exactly one time.

If a process does not complete, the worker role must reprocess the message.

You need to recommend an approach for the worker role to manage messages in the queue.

What should you recommend?

- A. Process the message and then delete it from the queue.
- B. Delete the message from the queue when retrieving the message.
- C. Set the visibility timeout of the message to 1 when retrieving the message.
- D. Process the message and then set the visibility timeout of the message to the maximum value.

Correct Answer: A

QUESTION 6

You need to implement exception handling for the `ModifyCommentText` method in the `WikiAgent` class. How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth point.

Hot Area:

Answer Area

```
try
{
    await StateManager.RemoveStateAsync(id);
    if (await StateManager.ContainsStateAsync(id)) return body;
    await StateManager.GetOrAddStateAsync(id, id);
    if (await StateManager.GetStateAsync<string>(id) != null) return body;

    var newBody = ...

    await StateManager.SaveStateAsync();
    await StateManager.ClearCacheAsync();
    await StateManager.AddStateAsync(id, id);
    await StateManager.RemoveStateAsync(id);

    return newBody;
}
catch
{
    await StateManager.SaveStateAsync();
    await StateManager.ClearCacheAsync();
    await StateManager.RemoveStateAsync(id);
    await StateManager.TryRemoveStateAsync(id);

    throw;
}
```

Correct Answer:

Answer Area

```
try
{
    await StateManager.RemoveStateAsync(id);
    if (await StateManager.ContainsStateAsync(id)) return body;
    await StateManager.GetOrAddStateAsync(id, id);
    if (await StateManager.GetStateAsync<string>(id) != null) return body;

    var newBody = ...

    await StateManager.SaveStateAsync();
    await StateManager.ClearCacheAsync();
    await StateManager.AddStateAsync(id, id);
    await StateManager.RemoveStateAsync(id);

    return newBody;
}
catch
{
    await StateManager.SaveStateAsync();
    await StateManager.ClearCacheAsync();
    await StateManager.RemoveStateAsync(id);
    await StateManager.TryRemoveStateAsync(id);

    throw;
}
```

QUESTION 7

You need to enable monitoring and diagnostic logging for the VMs.

Solution: Run the Azure PowerShell command `Get-AzureRmVMDiagnosticsExtension` and include the VM name and resource group name as parameters.

Does the solution meet the goal?

A. Yes

B. No

Correct Answer: B

QUESTION 8

You are designing a Windows Azure application that will use Windows Azure Table storage.

The application will allow teams of users to collaborate on projects.

Each user is a member of only one team. You have the following requirements:

You need to recommend an approach for partitioning table storage entities.

What should you recommend?

- A. Partition by user.
- B. Partition by team.
- C. Partition by project.
- D. Partition by the current date.

Correct Answer: B

QUESTION 9

You manage Azure Web Apps for a company. You migrate an on-premises web app to Azure. You plan to update the Azure Web App by modifying the connection string and updating the files that have changed since previous revision.

The deployment process must use Secure Socket Layer (SSL) and occur during off-peak hours as an automated batch process.

You need to update the Azure Web App.

What should you do?

- A. Configure a File Transfer Protocol (FTP) transfer script.
- B. Deploy the project from Microsoft Visual Studio.
- C. Run theNew-AzureRMWebAppAzure PowerShell cmdlet.
- D. Run theNew-AzureRmResourceGroupDeploymentAzure PowerShell cmdlet.

Correct Answer: D

QUESTION 10

Which of the following is the MOST significant risk to business continuity when using an external cloud service provider?

- A. Unauthorized access to customer data

B. Vendor being purchased
C. Virtual server failure

C. Vendor going out of business

Correct Answer: A

If your application stores and retrieves very sensitive data, you might not be able to maintain it in the cloud. Similarly, compliance requirements could also limit your choices. References: <http://cloudacademy.com/blog/cloud-migration-benefits-risks/>

QUESTION 11

You have six Ubuntu Linux virtual machines (VMs) that run a Hadoop cluster on Azure. All VMs were deployed by using Azure Resource Manager (ARM) templates and Azure PowerShell cmdlets. One of the VMs runs a custom web user

interface that allows users to examine the processing jobs within the Hadoop cluster. You are planning a backup strategy for long-term retention and recovery that includes geo-replication.

The backup and recovery solution must be cost effective.

You need to backup all VMs.

Which five actions should you perform in sequence? To answer, move the appropriate actions from the list of actions in the answer area and arrange them in the correct order.

Select and Place:

Actions

- Select the VMs to include in the backup.
- Select the appropriate backup policy.
- Create a recovery services vault for each VM that has geo-redundant storage replication enabled.
- Set the backup goal to **Azure and VM**.
- Run and confirm that an initial backup has been completed for all VMs.
- Create a backup vault for the VM backups that has geo redundant storage replication enabled.
- Create a recovery services vault for the VM backups that has locally-redundant storage replication enabled.
- Create a recovery services vault for the VM backups that has geo-redundant storage replication enabled.

Answer Area

Correct Answer:

Actions

Create a recovery services vault for each VM that has geo-redundant storage replication enabled.

Create a backup vault for the VM backups that has geo redundant storage replication enabled.

Create a recovery services vault for the VM backups that has locally-redundant storage replication enabled.

Answer Area

Create a recovery services vault for the VM backups that has geo-redundant storage replication enabled.

Set the backup goal to **Azure and VM**.

Select the appropriate backup policy.

Select the VMs to include in the backup.

Run and confirm that an initial backup has been completed for all VMs.

QUESTION 12

You need to deploy the Web App.

How should you complete the relevant Azure PowerShell command? To answer, select the appropriate Azure PowerShell segment from each list in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

<code>./publish-webApplicationWebSite.ps1 -Configuration</code>	<input type="text" value="environment.json"/> <input type="text" value="contosoweb.zip"/> <input type="text" value="contosoweb.deploy.cmd"/>
<code>-WebDeployPackage</code>	<input type="text" value="environment.json"/> <input type="text" value="contosoweb.zip"/> <input type="text" value="contosoweb.deploy.cmd"/>

Correct Answer:

Answer Area

<code>./publish-webApplicationWebSite.ps1 -Configuration</code>	<input checked="" type="text" value="environment.json"/> <input type="text" value="contosoweb.zip"/> <input type="text" value="contosoweb.deploy.cmd"/>
<code>-WebDeployPackage</code>	<input type="text" value="environment.json"/> <input checked="" type="text" value="contosoweb.zip"/> <input type="text" value="contosoweb.deploy.cmd"/>
