QUESTION 1

HOTSPOT

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the

scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription. The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

The network contains the computers configured as shown in the following table.

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

1.

<https://portal.fabrikam.com>

2.

<https://adminportal.fabrikam.com>

3.

<https://management.fabrikam.com>

4.

Privileged endpoint: 192.168.100.100

5.

Hardware lifecycle host: 192.168.101.101

6.

<https://adminmanagement.fabrikam.com>

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

1.

SQL Server

2.

App Service

End of repeated scenario.

You need to configure the App Service resource provider to offer the Small worker tier to tenants.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Connect to a URL of:

	▼
https://192.168.100.100	
https://adminportal.fabrikam.com	
https://portal.fabrikam.com	

Create an instance of:

	▼
The Controller role	
The Front End role	
The Management Server role	
The Publisher role	
The Web Worker role	

Correct Answer:

Answer Area

Connect to a URL of:

	▼
https://192.168.100.100	
https://adminportal.fabrikam.com	
https://portal.fabrikam.com	

Create an instance of:

	▼
The Controller role	
The Front End role	
The Management Server role	
The Publisher role	
The Web Worker role	

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-app-service-deploy>

QUESTION 2

HOTSPOT

Your company has a DNS domain named contoso.com.

You have a new Azure Stack integrated system that has the following deployment details:

1.

Region: West

2.

Naming prefix: as1

3.

Internal domain name: azurestack.local

4.

External domain name: cloud.contoso.com

You need to create a DNS delegation for the system.

How should you configure the delegation? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

Zone to delegate:

	▼
As1.cloud.contoso.com	
Azurestack.local	
Cloud.contoso.com	
West.azurestack.local	
West.contoso.com	

FQDN of a name server:

	▼
As1.azurestack.local	
As1-ns01.west.cloud.contoso.com	
Dns1.contoso.com	
Ns01.cloud.contoso.com.	

Correct Answer:

Answer Area

Zone to delegate:

	▼
As1.cloud.contoso.com	
Azurestack.local	
Cloud.contoso.com	
West.azurestack.local	
West.contoso.com	

FQDN of a name server:

	▼
As1.azurestack.local	
As1-ns01.west.cloud.contoso.com	
Dns1.contoso.com	
Ns01.cloud.contoso.com.

QUESTION 3

DRAG DROP

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the

scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a network that contains an Active Directory forest named fabrikam.com. The forest is synchronized to a Microsoft Azure Active Directory (Azure AD) tenant and has an Azure subscription. The company also has an Azure AD tenant named contoso.com. Contoso.com has an Azure subscription. Contoso.com includes foreign principals.

Computer name	Operating system	Configuration
Server1	Windows Server 2016 Datacenter	Hyper-V host that hosts two test virtual machines
Server2	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server primary replica of an Always On availability group in a cluster named Cluster1
Server3	Windows Server 2016 Datacenter	Microsoft SQL Server 2016 server, secondary replica of an Always On availability group in Cluster1
Server4	Windows Server 2016 Datacenter	Member of Cluster1
Server5	Windows Server 2016 Datacenter	File server
Client1	Windows 10 Enterprise	Privileged access workstation

The network contains the computers configured as shown in the following table.

Fabrikam.com contains a user named User1.

For operating system deployment, the company uses a custom operating system image of Windows Server 2016 Datacenter named Image1.

You have an Azure Stack integrated system that is accessed by using the following endpoints:

1.

<https://portal.fabrikam.com>

2.

<https://adminportal.fabrikam.com>

3.

<https://management.fabrikam.com>

4.

Privileged endpoint: 192.168.100.100

5.

Hardware lifecycle host: 192.168.101.101

6.

<https://adminmanagement.fabrikam.com>

You onboard contoso.com as a guest directory tenant on the Azure Stack integrated system.

You implement in the following Azure Stack providers:

1.
SQL Server
2.
App Service

End of repeated scenario.

You need to ensure that tenants can use Image1 to deploy virtual machines.

Which three actions should you perform from <https://adminportal.fabrikam.com> in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Select and Place:

Actions

- Delegate the Subscription resource provider.
- Create an offer.
- Create a Marketplace item.
- Add the image to the Compute resource provider.
- Upload the image to a blob container.

Answer Area

Correct Answer:

Actions

Delegate the Subscription resource provider.

Create an offer.

Answer Area

Upload the image to a blob container.

Add the image to the Compute resource provider.

Create a Marketplace item.

<https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-add-vm-image>

QUESTION 4

Note: This question is part of a series of questions that use the same scenario. For your convenience, the scenario is repeated in each question. Each question presents a different goal and answer choices, but the text of the scenario is exactly the same in each question in this series.

Start of repeated scenario.

Your company has a main office in New York and a branch office in Toronto. Each office has a dedicated connection to the Internet. Each office has a firewall that uses inbound and outbound rules.

The company has an on-premises network that contains several datacenters. The datacenters contain multiple hypervisor deployments, including Window Server 2016 Hyper-V. The network uses Microsoft System Center for monitoring and

Windows Azure Pack for self-service.

The company has a Microsoft Azure subscription that contains several workloads. You use Azure Resource Manager

templates and other automated processes to create and manage the resources in Azure.

You have an Azure Stack integrated system in the New York office. The company has a development team in the Toronto office and a development team in the New York office. The system has an offer named Offer1. Several tenants have

subscriptions based on Offer1.

You have a Hyper-V host named Server1 that runs Windows Server 2012 R2. Server1 is used for testing. The hardware on Server1 can support the deployment of the Azure Stack Development Kit.

You have a Generation 1 virtual machine named VM1 that runs Windows Server 2012 R2. VM1 is deployed to a Hyper-V host that runs Windows Server 2016. VM1 has a fixed size disk named VM1.vhdx that is 200 GB.

End of repeated scenario.

You need to ensure that you can import VM1 to Azure Stack.

What should you do?

- A. Recreate VM1 as a Generation 2 virtual machine.
- B. Convert the disk to a VHD.
- C. Convert the disk to a dynamically expanding disk.
- D. Upgrade VM1 to Windows Server 2016.

Correct Answer: B

Azure supports only generation 1 VMs that are in the VHD file format and have a fixed sized disk. The maximum size allowed for the VHD is 1,023 GB. You can convert a generation 1 VM from the VHDX file system to VHD and from a dynamically expanding disk to fixed-sized. But you can't change a VM's generation.

Incorrect Answers:

A: Azure supports only generation 1 VMs that are in the VHD file format.

C: Azure Stack does not support dynamic VHDs. Resizing a virtual machine (VM) with a dynamic disk attached to it leaves the VM in a failed state.

References: <https://docs.microsoft.com/en-za/azure/virtual-machines/windows/prepare-for-upload-vhd-image>
<https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-update-1802>

QUESTION 5

You have an Azure Stack integrated system.

You need to view the public IP address used by tenants. The solution must include the list of dynamically and statically assigned IP addresses.

Which blade should you review from the Azure Stack administrator portal?

- A. Offers

- B. Resource providers > Health
- C. Virtual networks
- D. Resource providers > Network

Correct Answer: D

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-viewing-public-ip-address-consumption>

QUESTION 6

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack integrated system that runs in a connected environment.

You need to recommend an interval for installing Microsoft software update packages to Azure Stack. The solution must ensure that you can receive Microsoft support.

Solution: You recommend that Microsoft software updates be installed monthly.

Does this meet the goal?

- A. Yes
- B. No

Correct Answer: A

For your Azure Stack deployment to remain in support, it must run the most recently released update version or run either of the two preceding update versions.

Microsoft will release update packages for Azure Stack integrated systems on a regular cadence that will typically fall on the fourth Tuesday of every month.

Thus to remain in support you must be running one of the last three update versions and, as an update version is released every month, you need to install updates at least every three months.

References:

<https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-servicing-policy> <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-updates>

QUESTION 7

NOTE: This question is part of a series of questions that present the same scenario. Each question in the series

contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution,

while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have an Azure Stack integrated system that contains four nodes named Node1, Node2, Node3 and Node4.

You plan to replace Node2.

You need to drain the active workloads that run on Node2.

Solution: From Node1, you run the Repair-AzsScaleUnitNode cmdlet. Does this meet the goal?

A. Yes

B. No

Correct Answer: B

The Drain action evacuates all active workloads by distributing them among the remaining nodes in that particular scale unit. To run the drain action through PowerShell, use the Disable-AzsScaleUnitNode cmdlet.

Incorrect Answers:

A: The Repair-AzsScaleUnitNode cmdlet repairs the node. It does not drain the node. References:
<https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-replace-node>

QUESTION 8

HOTSPOT

You are preparing a Linux image for upload to Azure Stack.

You need to install the Microsoft Azure Linux Agent manually.

You install the python-setuptools.

Which command should you run next? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

sudo

apt-get
python3
yum

 setup.py

install
python-setuptools
update

 --register-service

Correct Answer:

Answer Area

sudo

apt-get
python3
yum

 setup.py

install
python-setuptools
update

 --register-service

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-linux#prepare-your-own-image>

QUESTION 9

You deploy the Azure Stack Development Kit.

You receive the following Service Fabric warning alert: "The infrastructure role Infrastructure management controller is experiencing issues."

You need to resolve the problem as quickly as possible.

What should you do?

- A. From the privileged endpoint, run Restart-Computer.
- B. From the Azure Stack administrator portal, restart the infrastructure role.
- C. Restart the development kit host computer.
- D. Contact Microsoft support and follow the instructions provided.

Correct Answer: B

QUESTION 10

DRAG DROP

You have an Azure Stack integrated system that uses a Microsoft Azure Active Directory (Azure AD) tenant named fabrikam.com as the identity provider.

You need to onboard contoso.com as a guest directory tenant.

Which action should each role perform? To answer, drag the appropriate actions to the correct roles. Each action may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Select and Place:

Actions	Answer area
Run Register-AzsGuestDirectoryTenant against http://adminmanagement.fabrikam.com.	The Azure Stack cloud operator: <input type="text"/> The global administrator of contoso.com: <input type="text"/>
Run Register-AzsGuestDirectoryTenant against http://management.fabrikam.com.	
Run Register-AzSWithMyDirectoryTenant against http://adminmanagement.fabrikam.com.	
Run Register-AzSWithMyDirectoryTenant against http://management.fabrikam.com.	

Correct Answer:

Actions	Answer area
<input type="text"/>	The Azure Stack cloud operator: <input type="text"/> The global administrator of contoso.com: <input type="text"/>
Run Register-AzsGuestDirectoryTenant against http://management.fabrikam.com.	
Run Register-AzSWithMyDirectoryTenant against http://adminmanagement.fabrikam.com.	Run Register-AzSWithMyDirectoryTenant against http://management.fabrikam.com.
<input type="text"/>	

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-enable-multitenancy>

QUESTION 11

You have an Azure Stack integrated system.

You discover that a hardware failure occurred on a node named Node1.

You need to power off Node1.

Which cmdlet should you run?

- A. Stop-HpcAzureNode
- B. Disable-AzsScaleUnitNode
- C. Shutdown-HpcNode
- D. Stop-AzsScaleUnitNode

Correct Answer: D

References: <https://docs.microsoft.com/en-us/azure/azure-stack/azure-stack-node-actions>

QUESTION 12

HOTSPOT

You have an Azure Stack integrated system that uses a namespace of fabrikam.onmicrosoft.com.

A company named ADatum Corporation has a Microsoft Azure Active Directory (Azure AD) domain named adatum.com.

You need to ensure that ADatum users can sign in to <https://portal.local.fabrikam.onmicrosoft.com>.

Which command should you run from fabrikam.onmicrosoft.com? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

Answer Area

`New-AzureRmTenantSubscription` `-AdminResourceManagerEndpoint` `https://adminmanagement.local.fabrikam.onmicrosoft.com`

`Register-AzSGuestDirectoryTenant`

`Register-AzSWithMyDirectoryTenant`

`-DirectoryTenantName` `adatum.com` `-GuestDirectoryTenantName` `adatum.com`

`fabrikam.onmicrosoft.com` `fabrikam.local.azurestack.external`

`portal.local.azurestack.external` `fabrikam.onmicrosoft.com`

`-location "local"`

Correct Answer:

Answer Area

```

-AdminResourceManagerEndpoint https://adminmanagement.local.fabrikam.onmicrosoft.com
New-AzureRmTenantSubscription
Register-AzSGuestDirectoryTenant
Register-AzSWithMyDirectoryTenant

-DirectoryTenantName
adatum.com
fabrikam.onmicrosoft.com
portal.local.azurestack.external

-GuestDirectoryTenantName
adatum.com
fabrikam.local.azurestack.external
fabrikam.onmicrosoft.com

-location "local"

```
