QUESTION 1

In OneFS, what are valid identifiers when comparing an access token to file authorization data?

- A. SID, UID, and GID
- B. SID only
- C. UID and GID only
- D. File owner and SID only

Correct Answer: A

QUESTION 2

What is required to perform management operations through the web administration interface?

- A. An external IP address reachable over TCP port 8080
- B. Direct serial connectivity to any node in the cluster
- C. TCP port 23 open between Isilon and a remote management server
- D. ConnectEMC services enabled on the cluster

Correct Answer: A

QUESTION 3

A node does not shut down properly during a systematic node shutdown process. What is the proper way to restart a node in this state?

- A. Run `isi config >>> reboot`
- B. Power cycle the node
- C. Run `reboot` from a shell
- D. Run `halt` from a shell

Correct Answer: A

QUESTION 4

What is the default behavior when a UNIX NFSv3 client executes a `chmod` command when the EMC Isilon ACL policy is configured as Windows only?

- A. The UNIX client receives an error on the `chmod` request

- B. The chmod request is granted and a corresponding Windows ACE is added into the file or folder's ACL
- C. The existing Windows ACL is converted to UNIX security
- D. The existing synthetic ACL is converted to a Windows ACL

Correct Answer: A

QUESTION 5

What benefit does GNA provide to the cluster?

- A. Metadata read acceleration across the cluster
- B. Namespace read/write acceleration across the cluster
- C. An additional level of cache on SSDs used for metadata
- D. Metadata read acceleration specifically for the job engine

Correct Answer: A

QUESTION 6

What is the recommended best practice when setting snapshot deletion schedules?

- A. Determined by your RTO and RPO SLAs
- B. Set to six times the length of the snapshot policy period
- C. Set to delete after the next snapshot is taken
- D. Set to one year after the snapshot is taken

Correct Answer: A

QUESTION 7

Which task requires preparation for successful failover?

- A. Creating shares and exports on the target cluster
- B. Using the same cluster name and IP address for source and target
- C. Breaking the target associations of SyncIQ policies
- D. Testing each SyncIQ policy to prepare resync policies

Correct Answer: A

QUESTION 8

What is the default limit for the total number of snapshots allowed on an EMC Isilon cluster?

- A. 1,024
- B. 2,048
- C. 10,000
- D. 20,000

Correct Answer: D

QUESTION 9

An organization requires the ability to segregate various administrative rights. Which EMC Isilon feature enables this functionality?

- A. RBAC
- B. SmartConnect
- C. SmartLock
- D. InsightIQ

Correct Answer: A

QUESTION 10

Which semi-automated process with SyncIQ has the capability to interrupt sync jobs in progress?

- A. Failover
- B. Fail back
- C. Continuous mode
- D. Initial sync compare

Correct Answer: A

QUESTION 11

In which directory can you find snapshots stored on an EMC Isilon cluster?

- A. /ifs/.snapshot
- B. /ifs/.ifsvar

C. /ifs/.isilon

D. /ifs/data

Correct Answer: A

QUESTION 12

What does the '\\And\\' condition provide in file pool policy filter use?

A. Increases the granularity of the file match criteria

B. Reduces the number of file pool policies

C. Combines multiple file pool policy filters with the same actions

D. Broadens the file pool policy match criteria

Correct Answer: A

QUESTION 13

Before deploying a new EMC Isilon cluster you decide to confirm the details of the installation with the customer. The customer would like to make a change to the access zones in the configuration guide.

What should you do first?

A. Contact the design team

B. Update the configuration guide

C. Contact EMC change control

D. Collect system configuration

Correct Answer: A

QUESTION 14

After enabling auditing on an EMC Isilon cluster, which configuration changes are tracked?

A. Changes made through PAPI system only

B. Changes made by a user in a shell only

C. Changes made by root in a shell only

D. Changes made by a batch file only

Correct Answer: A

QUESTION 15

What is one requirement to join multiple authentication sources through an access zone?

- A. Must belong to only the joined access zone
- B. Must use a common /ifs tree for all access zones
- C. Must belong to all access zones
- D. Must only join AD domains in the same forest

Correct Answer: A
