- A. All jobsteps within the job have failed. Review the history logs. Fix the problems. Re-run the job.
- B. At least one jobstep within the job has failed. Review the history log for the failing jobsteps. Fix the problem. Re-run the job.
- C. At least one jobstep within the job has failed. Review the history log for the failing jobsteps. Fix the problem. Re-run the failing jobsteps.
- D. Review the Deployment Manager client log for cause of failure. Fix the problem. Rerun the job.

Correct Answer: B

QUESTION 3

An analyst applies changes to a Modeler stream through the Modeler client and stores the stream to the repository. Still, the users opening the saved stream do not find the changes.

What would be the likely cause?

- A. The analyst forgot to save the changes.
- B. The users have no permission to the stream.
- C. The repository was not re-indexed after the stream update.
- D. The analyst forgot to move the production label to the latest version when storing the stream.

Correct Answer: D

QUESTION 4

Other than the requirement to belong to a role that contains the '\\Define Credentials\\' action, what other criteria must be in place for the user to create a new credential?

- A. Be able to perform the '\\Create Subscriptions\\' action.
- B. Be a member of the group that you are creating the credential for.
- C. Have Write permission to the Credentials folder under Resource Definitions.
- D. Be logged in as the '\\admin\\' profile that was created during the initial configuration.

Correct Answer: C

QUESTION 5

RandD fixed an issue with Modeler integration in Deployment Manager client. A Fix Pack has been released. For which product and which fix should the customer look on Fix Central?

- A. Product: CandDS; Fix Pack for CandDS Server
- B. Product: CandDS; Fix Pack for CandDS Adapter
- C. Product: Modeler; Fix Pack for Modeler Server
- D. Product: Modeler; Fix Pack for Modeler Adapter

Correct Answer: D

QUESTION 6

Which statement correctly applies to the versioning capability of CandDS?

- A. Version control and object version labels ensure the latest versions of assets are being used in production processes.
- B. Old object versions are automatically deleted to preserve storage.
- C. An analyst can store a version of a file in development, and modify it until it is finalized and ready to be moved into a production process.
- D. Versioning refers to the ability to merge multiple object versions into one version.

Correct Answer: C

QUESTION 7

A user wants a job, containing multiple jobsteps, to send an email to an analyst each time a specific jobstep has failed to

run. How can this be achieved?

- A. Connect the jobstep to a Notification jobstep using a Pass connector. Add the analyst email to the Notification jobstep
- B. Connect the jobstep to a Notification jobstep with a Sequential connector. Add the analyst email to the Notification jobstep
- C. Select the jobstep and add the analyst email to the Recipients for Job Step Failure Notifications
- D. Select the job and add the analyst email to the Recipients for Job Step Failure Notifications

Correct Answer: C

QUESTION 8

When debugging a server side issue, which of the following log files should be gathered from a WebSphere-deployed CandDS 5.0 environment?

- A. cds.log
- B. trace.log
- C. debug.log
- D. stdout.log

Correct Answer: A

QUESTION 9

A customer created a parallel CandDS installation on a separate server, using a copy of the production repository database. She can login to the repository, objects are being displayed, but most jobs fail to run and cannot be edited. What could be a likely cause?

- A. During the installation, the customer chose to Discard Existing Data data rather than Preserve Existing Data.
- B. Application server has not been started.
- C. The save/restore process only migrated part of the content repository data.
- D. Additional packages, existing in the production environment, have not been reinstalled after installation of the parallel environment.

Correct Answer: D

QUESTION 10

Where should a user define Job Variables?

- A. Job variables are created at the job level
- B. Job variables are created per jobstep
- C. Job variables are created at server level, and made available to all jobs
- D. Job variables are created within the applications that integrate with CandDS, such as Modeler

Correct Answer: A

QUESTION 11

A customer seeks advice to upgrade his CandDS 4.2.1 version to the latest release. How should the application server data be migrated?

- A. Create a new application server instance (server, domain, profile) when migrating to a new version.
- B. Duplicate the existing application server instance and run the new installation against the duplicate.
- C. Run the new installation against the same application server instance that is used by the 4.2.1 version of CandDS.
- D. Use the CandDS J2EE server migration utility to handle application server migration.

Correct Answer: A

QUESTION 12

Which application allows the running of CandDS jobs via a web interface?

- A. Deployment Manager
- B. BIRT Client
- C. Deployment Portal
- D. Scoring Service

Correct Answer: C
