QUESTION 1

A large medical institution needs to centralize malware and anti-virus scanning in its environment. Which vSphere component will satisfy this requirement?

- A. vShield Endpoint
- B. vCloud Network and Security
- C. vSphere Data Protection Advanced
- D. vCenter Operations Manager

Correct Answer: A

QUESTION 2

The oncall system administrator has made a change on the ESXi host requiring a restart of the management network. Lockdown mode is enabled. Which action should the administrator take to restart the management network?

- A. Use the vSphere client to enable local authentication services, then logon directly to the ESXi Shell and run services mgmt-vmware restart.
- B. Use an SSH client to logon to the command line and run services mgmt-vmware restart.
- C. Use the vSphere client to enable the DCUI and then logon to the ESXi Shell and use the menu to restart the management network.
- D. Logon directly to the DCUI and use the menu to restart the management network.

Correct Answer: D

QUESTION 3

An administrator needs to configure a Linux virtual machine template to support guest customization. The administrator has installed VMware Tools. Which additional component is necessary to enable Linux guest OS customization?

- A. Perl
- B. bash
- C. Python
- D. Sysprep

Correct Answer: A

QUESTION 4

Which vSphere feature creates a copy of a virtual machine that can be stored locally within a cluster or at another site, and provides the ability to rapidly restore a virtual machine within minutes?

- A. vSphere Data Protection
- B. vSphere Replication
- C. vSphere Snapshots
- D. vSphere Heartbeat

Correct Answer: B

QUESTION 5

A vSphere administrator attempts to move a powered on virtual machine into a resource pool that is configured in an HA/DRS cluster. The operation fails. What condition would cause this behavior?

- A. HA admission control prevented the movement of the virtual machine due to insufficient resources.
- B. Resource pool admission control prevented the movement of the virtual machine due to insufficient resources.
- C. The virtual machine was not powered off before being moved into the resource pool.
- D. The virtual machine's hardware level did not match the level of the existing virtual machines in the resource pool.

Correct Answer: B

QUESTION 6

A Windows Server 2008 virtual machine with the following configuration receives an Out of Space condition indicator:

The virtual machine uses thin provisioned virtual disks.

The VMFS5 datastore on which the virtual machine's files reside is on a thin provisioned LUN.

30% of the VMFS datastore content is no longer needed.

The storage array supports VASA and VAAI.

Which action should the vSphere administrator take to resolve the Out of Space problem without requesting additional space on the storage array?

- A.
Delete unneeded files on the VMFS datastore and then use vmkfstools to reclaim deleted blocks.
- B.
Delete unneeded files on the VMFS datastore, right-click the datastore in vSphere Web Client, and then select the Reclaim Deleted Blocks option.
- C.
Delete some files from the guest OS and defrag its file system.
- D.
Delete some files from the guest OS and use vmkfstools to reclaim the deleted blocks.

Correct Answer: A

QUESTION 7

A vSphere administrator has created a Virtual SAN Cluster with Automatic Mode Disk Groups. The cluster includes three ESXi hosts contributing one SSD and six SAS disks each. The administrator has four new ESXi hosts that boot from a fiber channel array and have no local disks attached. These four new hosts need additional shared storage but there is insufficient space on the fiber channel array. The hardware budget is limited.

What can the administrator do to provide the needed storage for the lowest cost?

- A. Add the four new hosts to the Virtual SAN Cluster and use the existing storage in the cluster.
- B. Add an SAS RAID controller to each of the new hosts. Attach one SSD and six SAS disks to each RAID controller and then add the four hosts to the Virtual SAN cluster.
- C. Add the four new hosts to the Virtual SAN Cluster and contribute the fiber channel disks to the Virtual SAN.
- D. Add the four new hosts to the Virtual SAN Cluster and change to Manual Mode Disk Groups.

Correct Answer: A

QUESTION 8

A vSphere administrator has been using vSphere in evaluation mode and now wants to deploy an environment that provides the same features. Which edition of vSphere provides similar functionality to evaluation mode?

- A. Enterprise Plus
- B. Enterprise
- C. Standard

D. Essentials

Correct Answer: A

QUESTION 9

What happens to the status of users already logged into ESXi Shell when a vSphere administrator enables lockdown mode?

- A. Users remain logged in and can run commands, except to disable lockdown mode.
- B. Users remain logged in and can run commands, including disabling lockdown mode.
- C. Users are immediately logged out of ESXi Shell.
- D. Users are logged out after a timeout specified by the vSphere administrator.

Correct Answer: A

QUESTION 10

An administrator needs to unmount a datastore that is also used for HA storage heartbeats.

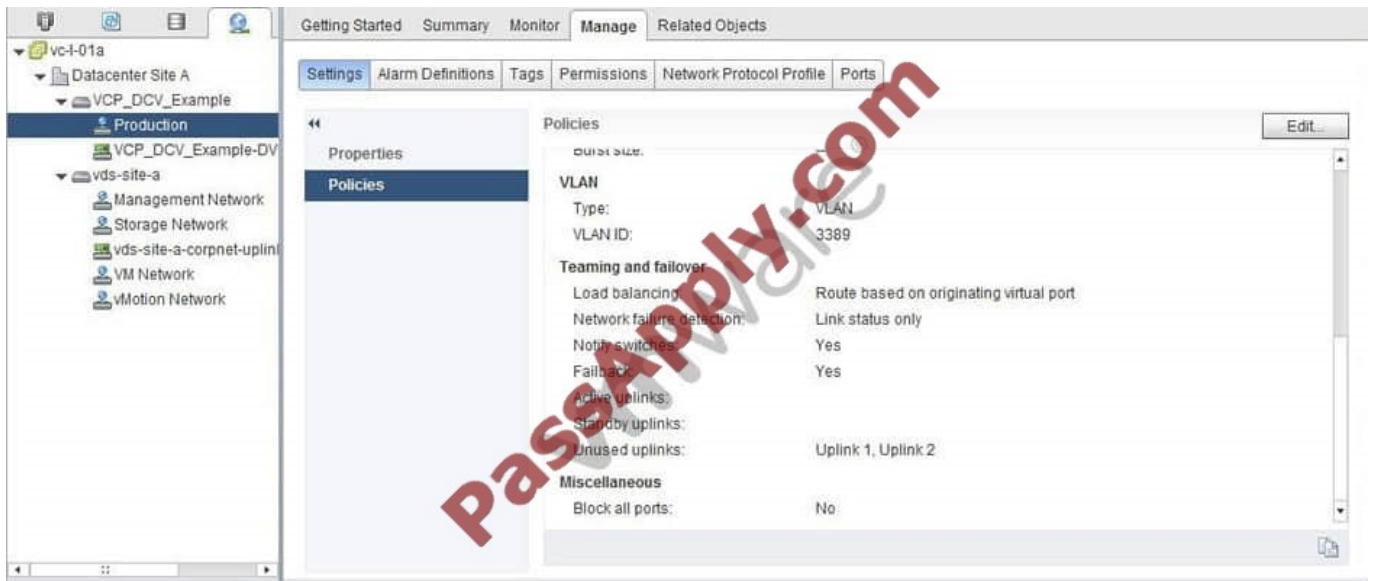

What is the least disruptive method for an administrator to perform this activity on a slave HA host?

- A. On the Datastore Heartbeating tab, unmount the datastore normally and confirm a new datastore has been selected.
- B. On the Datastore Heartbeating tab, specify an alternate datastore, then unmount the datastore normally.
- C. Disable HA datastore heartbeats, then unmount the datastore.
- D. Reduce the number of heartbeat datastores, then remove the datastore from the heartbeat list.

Correct Answer: B

QUESTION 11

-- Exhibit -

-- Exhibit -The administrator needs to modify the problematic configuration shown in the exhibit to meet the following requirements:

1. Uplink ports must connect to a 2-port Etherchannel connection. 2. Traffic must pass, even in the event of a port failure. Which two configuration changes should the administrator make? (Choose two.)

- A. Change the Load balancing algorithm to Route based on ip hash
- B. Change the Load balancing algorithm to Route based on physical NIC load
- C. Move Uplink 1 into Active Uplinks and Uplink 2 into Standby Uplinks
- D. Move both uplinks into the Active Uplinks

Correct Answer: AD

QUESTION 12

The vSphere administrator attempts to connect to an ESXi host via an SSH client and receives the following security alert: -- Exhibit -

-- Exhibit -The vSphere administrator needs to determine whether the RSA key fingerprint shown in the security alert is the fingerprint of the intended ESXi host.

Which tool should the vSphere administrator use?

- A. Direct Console User Interface
- B. vSphere Client
- C. vSphere Web Client
- D. vSphere Management Assistant

Correct Answer: A
