QUESTION 1

A large Internet company has services running on physical machines, as well as self-built monitoring and alert system. Recently, the company wants to migrate part of the services to Alibaba Cloud and use CloudMonitor to monitor ECS instances and set alerts.

What should the company do to quickly interconnect CloudMonitor alerts with the self-built alert system, and handle both alerts (alerts about the physical machines and ECS instances) in self-built alert system?

- A. Use the Event Monitoring function provided by CloudMonitor to consume alerts sent from self-built alert system
- B. Call the API for querying data provided by CloudMonitor. regularly query data, and write a code to check whether indicators are abnormal
- C. Call the API for obtaining messages and alerts that are sent to self-build alert system
- D. This cannot be implemented.

Correct Answer: B

QUESTION 2

You applied for an SSL certificate through Alibaba Cloud's SSL Certificates Service. During the application, you selected "Manual" at the "CSR" step. You now want to install your certificate on a server running Apache.

What must you do?

- A. You must revoke your certificate and re-apply, this time choosing "Automatic" at the "CSR Generation" step. Otherwise, the SSL certificate cannot be downloaded.
- B. You can download a crt file of type "Other" from the SSL Certificates Service console, then use openssl to convert this file to pfx format for use with Apache.
- C. SSL Certificates Service doesn't support the type of certificates needed by Apache. They cannot be used together.
- D. You can use the "generate pfx file" function built into the SSL Certificates Service to manually generate and download the pfx file needed by Apache.

Correct Answer: D

QUESTION 3
