QUESTION 1

Which two statements are true about inter-portlet communication in the Web Dock portlet? (Choose two.)

- A. Client-side communication uses Dojo events.
- B. Client-side communication is built on OpenAjax.
- C. The Web Dock portlet does not support portlet wires.
- D. Server-side communication is based on JSR 286 events.
- E. The Web Dock portlet supports only public render parameters.

Correct Answer: CD

QUESTION 2

Matthew has developed a new system module to provide static JavaScript outside of the theme WAR. What is one benefit of storing the files externally?

- A. External files are loaded first.
- B. External files are more secure.
- C. External files are compressed by default.
- D. External files are shared by multiple themes.

Correct Answer: D

The difference between a static website and a portal is that three kinds of HTML files exist:

theme.html

Defines the markup that is identical for all the pages that this theme is applied to.

layout.html

Defines the decoration of the content area that can be different between pages.

skin.html

Defines the decoration of the individual portlets on the page. If the files used by the theme are not part of the theme folder, and therefore not part of the theme structure,

then those files are named external. External files are shared by multiple themes.

QUESTION 3

Which two options are valid uses of the XML Configuration interface? (Choose two.)

- A. Install a portlet.
- B. Clone a skin module.
- C. Delete a shared library.
- D. Back up an IBM WebSphere Portal server configuration.
- E. Export all property files from a WebSphere Portal server.

Correct Answer: DE

QUESTION 4

Which model is supported by the Remote Model REST service?

- A. PortletModel
- B. ContextModel
- C. ThemeListModel
- D. Language ListModel

Correct Answer: A

Remote Model SPI REST service The Remote Model SPI gives you access to portal models through REST services. It allows you to obtain and modify portal resources that are exposed by some of the models of the model SPI remotely, that is from clients that are outside the JVM of the server. This is achieved by means of REST services.

QUESTION 5

A developer wants to add two portlet preferences to his portlet application. Which file is the correct location to insert the preferences?

- A. web.xml
- B. portlet.xml
- C. application.xml
- D. preferences.xml

Correct Answer: B

QUESTION 6

Which folders are two of the root folders in the fs-type1 WebDAV entry point? (Choose two.)

- A. skins

- B. layout
- C. resources
- D. layout-templates
- E. theme-templates

Correct Answer: AD

older structure and reserved folder names The fs-type1 WebDAV entry points provide the following set of predefined root folders used by themes: themes skins layout-templates common-resources iwidgets

QUESTION 7

What is one benefit of using the Controller service provider interface (SPI)?

- A. Modifications can be made directly to the navigation model.
- B. The Controller SPI can be used to make changes to any virtual portal that is running on the system from the base portal.
- C. Changes can be made and applied to a running portal environment. The portal does not need to be restarted for the changes to take effect.
- D. The modifications that are made come into effect immediately for the controller and are reflected in the persistence layer without committing the controller.

Correct Answer: D

The Controller SPI provides controllers for portal resources. You can use these controllers to modify portal resources that are exposed by particular models of the Model SPI. Controllers offer methods to modify the topology and properties of the model and of its nodes. They expose the same interfaces as the corresponding read-only model, and they instantly reflect modifications that you apply to the controller. Note: While the modifications come into effect immediately for the controller, they not reflected in the persistence layer until you commit the controller and the changes that you made by it.

QUESTION 8

Don needs to update a custom layout in his production server. He made the necessary updates to the layout.html file in WebDAV, but his users are not seeing the changes.

What is the most likely cause of this incorrect behavior?

- A. He did not run the cef resh-page-layout-template task.
- B. He saved the updates in the themelist directory in WebDAV.
- C. He did not force a recompile of the Defaultjsp file in his custom theme.
- D. He did not restart the server, as required, for the layout updates to take effect.

Correct Answer: D

Explanation: MediaTomb is highly configurable and allows the user to set various options and preferences that define the servers behavior. Rather than enforcing certain features upon the user, we prefer to offer a number of choices where

possible. The heart of MediaTomb configuration is the config.xml file, which is located in the ~/.mediatomb directory. If the configuration file is not found in the default location and no configuration was specified on the command line,

MediaTomb will generate a default config.xml file in the ~/.mediatomb directory. The file is in the XML format and can be edited by a simple text editor, here is the list of all available options:

"Required" means that the server will not start if the tag is missing in the configuration.

"Optional" means that the tag can be left out of the configuration file.

QUESTION 9

Sally developed a custom theme module that requires Dojo to render it. In the custom module definition, she added the Dojo modules to the prerequisite list. Sally then added her custom module to the non-deferred section of the Deferred (Default) profile, leaving the Dojo modules in the deferred section.

What is the result of rendering a page in view mode with the Deferred (Default) profile assigned?

- A. The custom module is not run.
- B. The Dojo modules are promoted to non-deferred.
- C. A JavaScript error occurs, indicating that Dojo is undefined.
- D. A server-side error occurs, indicating that the Dojo modules are deferred.

Correct Answer: B

QUESTION 10

What is the mechanism that enables a portlet installed on a remote IBM WebSphere Portal server to be added to and displayed on a page in a local WebSphere Portal server?

- A. Impersonation
- B. Remote Web Services
- C. Remote Deployment for Portlets
- D. Web Services for Remote Portlets

Correct Answer: D

A Remote Rendering portlet is used to display Web content on a different portal server than the instance of IBM WebSphere Portal where IBM Workplace Web Content Management is installed
