QUESTION 2

What can a cross-object formula reference?

- A. Parent Only
- B. Both Parent and Child objects
- C. Child Only
- D. Records of the same Object

Correct Answer: A

Cross-object formulas are formulas that span two related objects and reference merge fields on those objects. Cross-object formulas can reference merge fields from a master ("parent") object if an object is on the detail side of a master-detail relationship. Cross-object formulas also work with lookup relationships. You can reference fields from objects that are up to 10 relationships away. Cross-object formulas are available anywhere formulas are used except when creating default values.
