QUESTION 1

In KVM, there are two ways for the virtual machine NIC to connect to the physical network: and ()

A. bridging, address translation

B. address translation, pass-through

C. bridge, pass-through

D. pass-through, bridge

Correct Answer: A

QUESTION 2

For scenarios such as archives that need to store large amounts of data for a long time, but do not need to read frequently, it is recommended Type of disk?

A. SAS disk

B. NL-SAS disk

C. SATA disk

D. SSD disk

Correct Answer: C

QUESTION 3

If VM A can ping VM B. which of the following can be inferred?

A. Virtual machine A and virtual machine B use the same network segment

B. Both virtual machine A and virtual machine B are configured with the correct IP addresses

C. Virtual machine A and virtual machine B use different network segments

D. Virtual machine A and virtual machine B run on the same physical host

Correct Answer: B

QUESTION 4

In-use memory exchange refers to using virtual memory or external storage for the virtual machine, and storing temporarily unused data on the virtual machine to external storage. When the system needs to use this data, it is then exchanged with data reserved in memory Exchange

A. TRUE

B. FALSE

Correct Answer: A

QUESTION 5

The following description of KVM and Xen is correct (multi-select)

A. Xen virtual machines can be converted into KVM virtual machines

B. Domain 0 and Domain U are concepts in KVM

C. KVM and Xen are both open source hypervisors

D. KVM and Xen can run in the same Host OS

Correct Answer: AC

QUESTION 6

The configuration of a Huawei switch port is as follows:

Interface (GigabitEhernet 0/0/1)

Port link-type trunk

Port trunk allow-pass vlan 16 17

According to the above configuration, the following statement is correct (D)

A. Data frame containing vlan 16 label will be stripped and forwarded when passing through the port

B. Data frames that do not contain any labels are dropped when passing through the port

C. When a data frame that does not contain any tags passes through the port, it will be tagged with VLAN 16 or VLAN 17 and Forward

D. Data frames containing VLAN 17 tags will be tagged and forwarded as they pass through the port

Correct Answer: D

QUESTION 7

In Huawei FusionCompute, the following incorrect description of port groups and security groups is

A. A virtual machine NIC is connected to a virtual port in the port group, and a virtual machine NIC is associated with a security groupA

B. B-port group is a collection of one or more virtual ports on a DVS, while a security group is a collection of one or more

rules

C. A DVS can have multiple port groups and a VM can be protected by multiple security groups

D. Security groups are based on port groups to protect virtual machines /// virtual network cards

Correct Answer: D

QUESTION 8

In Huawei FusionCompute, the memory and CPU resources used by virtual machines can only be provided by the same cluster. Therefore, the maximum computing resources that virtual machines can actually use cannot exceed the sum of resources available to all hosts in the cluster

A. True

B. False

Correct Answer: B

QUESTION 9

Virtualization technology can improve the utilization of hardware resources, reduce operation and operation and maintenance costs, and cloud computing also has these advantages. Therefore, cloud computing and virtualization technology are inseparable. // Cloud computing is not equal to virtualization

A. TRUE

B. FALSE

Correct Answer: B

QUESTION 10

The following incorrect description of the security group application scenario is

A. By setting security group rules, you can control permissions on folders in the virtual machine

B. By setting a security group rule, you can only allow remote login of virtual machines to specific IP addresses

C. By setting security group rules, you can protect virtual machines from being accessed

D. By setting a security group rule, you can make the virtual machine inaccessible to the FTP server

Correct Answer: A

QUESTION 11

In fusioncompute, the virtual switch is connected to the physical network via ().

A. INIC

B. Virtual network card

C. Port group

D. Uplink

Correct Answer: D

QUESTION 12

Cloud computing is the product of the development of the Internet and computing technology, so cloud computing must be inseparable from the network.

A. TRUE

B. FALSE

Correct Answer: A

QUESTION 13

. Where is the memory reuse function enabled in Huawei FusionCompute?

A. Host

B. operating system

C. virtual machine

D. Cluster

Correct Answer: D

QUESTION 14

In Huawei FusionCompute, when a host in the cluster fails, the virtual machine on that host will automatically Automatic migration to other hosts in the cluster

A. TRUE

B. FALSE

Correct Answer: B

QUESTION 15

Templates can be used to quickly deploy virtual machines. Currently, templates can only be made by converting or

cloning virtual machines.

A. TRUE

B. FALSE

Correct Answer: B
