

H13-622^{Q&As}

HCNP-Storage-CBDS (Constructing Big Data Storage)

Pass Huawei H13-622 Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

<https://www.passapply.com/h13-622.html>

100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by Huawei
Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

Which of the following file system configurations are correct for the N8500 clustered NAS storage systems? (Select two.)

- A. Set not more than 16 columns in a stripe file system to prevent serious data discretization.
- B. Set a block size to 8192 when the file system size is larger than 1TB.
- C. Set the number of columns consistent with that of RAID groups for a stripe file system
- D. You are advised to disable quotas if the number of files exceeds 40 million.

Correct Answer: BC

QUESTION 2

Which of the following statements about management ports on C72 nodes are correct? (Choose all that apply.)

- A. When the OceanStor 9000 cluster contains only C72 nodes and the number of C72 nodes is not smaller than three, each controller module A of the first three nodes provides one NIC0 port as the management port.
- B. When the C72 nodes and the non-C72 nodes are deployed together, you can select C72 nodes to provide independent management network ports.
- C. When the C72 nodes and the non-C72 nodes are deployed together and applied to object storage service, only the node that provides independent management network ports can serve as an object storage management node.
- D. When deploying a storage cluster, you need to separately assign an IP address to port NIC0 on the C72 node in the cluster.

Correct Answer: AC

QUESTION 3

Which of the following about WushanFS global cache technology employed by Huawei OceanStor 9000 is false?

- A. WushanFS global cache enables the memory spaces on all storage servers to logically form a unified memory resource pool.
- B. Data cached on a node cannot be hit by the read/write service of another node.
- C. Global cache helps improve the sharing of memory resources among nodes.
- D. The WushanFS uses a distributed lock mechanism to implement global management of cached data. The same service data is cached only on one node. Another node that needs to access the service data can apply for a lock to obtain the cached data.

Correct Answer: B

QUESTION 4

A customer has purchased an N8500 clustered NAS storage system configured with SATA and NL-5AS disks. In order to strike a balance between RAID reliability and read/write performance, which of the following configuration plans is recommended?

- A. 11-disk RAID 5 and one hot spare disk
- B. 11-disk RAID 6 and one hot spare disk
- C. 4-disk RAID10
- D. 9-disk RAID 5

Correct Answer: B

QUESTION 5

Which types of nodes are provided by Huawei OceanStor 9000? (Choose all that apply.)

- A. High-performance storage node
- B. Large-capacity active node
- C. Data storage node
- D. Data processing node

Correct Answer: AB

QUESTION 6

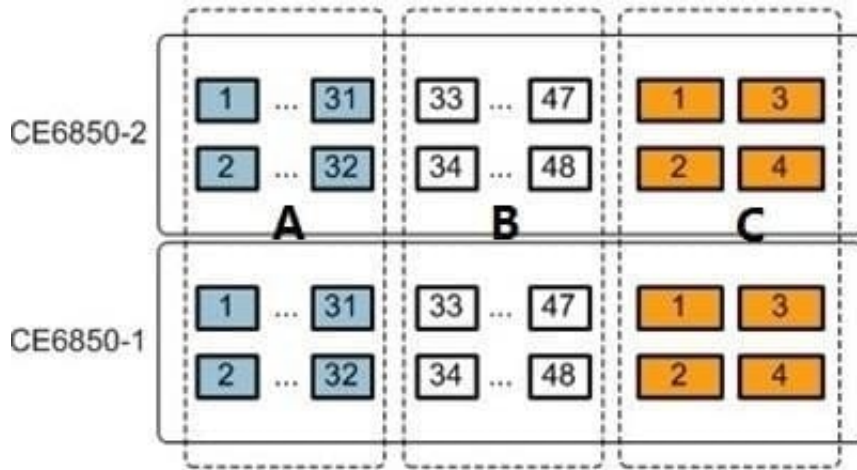

A NAS storage system supports file system sharing, and the underlying protocol transmits data based on iSCSI.

- A. True
- B. False

Correct Answer: B

QUESTION 7

The following figure shows the ports of two CE6850 switches when the OceanStor 9000 uses GE for the front-end network and 10GE for the back-end network. If the OceanStor 9000 uses C nodes, the ports in which area of the CE6850 switch must ports AO-0 and A0-1 on all the C nodes be connected to?

- A. A
- B. B
- C. C
- D. You do not need to connect C nodes to the CE6850 switch.

Correct Answer: A

QUESTION 8

The N8500 clustered NAS storage system supports bonding of multiple service network ports. Which of the following statements about bond4 and bond6 are correct? (Select three)

- A. The bond4 mode has unbalanced load issues in the "gatewayed" topology.
- B. The bond6 mode allocates and adjusts loads based on the workloads on the bond ports.
- C. The bond6 mode supports fault tolerance whereas the bond4 mode does not.
- D. The adaptive load balancing supported by the bond6 mode will definitely cause frequent switchovers among network adapters, increasing the system overhead.

Correct Answer: ABD

QUESTION 9

Which are customer benefits provided by the InfoTier feature of Huawei OceanStor 9000? (Choose all that apply.)

- A. The response to hotspot data is faster, improving the storage performance.
- B. The cost advantages of different storage media are brought into full play, reducing deployment and maintenance costs.
- C. The storage performance is improved, and data is intelligently managed.

D. Based on the mapping between file attributes and storage devices, files are automatically migrated, simplifying management and reducing management costs.

Correct Answer: ABCD

QUESTION 10

Which file sharing interface is not provided by Huawei OceanStor 9000?

- A. Object
- B. NFS
- C. CIS
- D. FTP

Correct Answer: A

QUESTION 11

The fencing function provided by an N8500 prevents split-brain from occurring. Which of the following statements about fencing are correct? (Select three)

- A. Monitors GAB and checks the changes of cluster members.
- B. Ensures the single view of cluster members.
- C. Prevents multiple nodes from using a volume manager to access the shared storage.
- D. Automatically recovers the master node if the cluster becomes abnormal.

Correct Answer: ABC

QUESTION 12

In the InfoEqualizer feature provided by Huawei OceanStor 9000, a zone is a collection of nodes. Different zones are isolated and provide different services. Nodes in a zone have the same dynamic and static domain names as well as characteristics of automatic load balancing.

- A. True
- B. False

Correct Answer: A

QUESTION 13

Which of the following statements about the file pool and file pool policies of the OceanStor 9000 is incorrect?

- A. One file can belong to different file pools,
- B. File pool policies come with priorities. For files, only the file pool policy of the highest priority takes effect.
- C. The characteristics of a file pool are in an AND relationship.
- D. File pool policies are available only after the InfoTier license is activated.

Correct Answer: C

QUESTION 14

You can use the HUAWEI OceanStor Toolkit to perform the operations such as preventive maintenance, information collection, and upgrade for the HUAWEI OceanStor 9000.

- A. True
- B. False

Correct Answer: A

QUESTION 15

When a NAS client attempts to connect to an OceanStor 9000 node, the user must enter the management IP address of the node.

- A. True
- B. False

Correct Answer: B
