QUESTION 1

IT QandM management refers to the comprehensive management of IT software and hardware operating environments (such as software environment and network environment), IT service systems, and IT QandM personnel by using related methods, methods, technologies, systems, processes, and documents, in IT QandM, which of the following events needs to be handled immediately?

- A. Prompt event
- B. Debugs events
- C. Incident event
- D. Early warning Event

Correct Answer: C

QUESTION 2

Which of the following operations can be performed by common users on the Cloud Management Platform (CMP) through computing resource management?

- A. Restart
- B. Transferring a Tenant
- C. Shutdown
- D. Apply for extension

Correct Answer: B

QUESTION 3

In the service migration scenario, which of the following statements about the service switchover procedure is incorrect?

- A. After the new server is enabled; you do not need to change the corresponding record on the DNS server
- B. For all service systems that connect to the source server, set the connection change to the destination server
- C. After the migration, check the system CPU, memory, and network performance and service access
- D. Stop the source server, synchronize data again (prevent new data generated during the migration), and enable the destination server

Correct Answer: D

QUESTION 4

Which of the following does not affect the creation of cloud hosts in the Cloud Management Platform (CMP)?

- A. Regional information
- B. Alarm Rule Configuration
- C. Network partition
- D. Availability zone information

Correct Answer: B

QUESTION 5

Which of the following statements about the Oracle tools RMAN used to back up, restore, and recover database is correct?

- A. Applies to the migration between different database platforms or versions
- B. The shutdown window is small, and the downtime is related to the total data volume
- C. Some data in the database can be migrated
- D. Online physical backup without interrupting production system services

Correct Answer: B

QUESTION 6

Which of the following items need to be collected before Huawei active-active solution is deployed?

- A. Service system
- B. Physical environment information
- C. Network information
- D. Data volume

Correct Answer: B

QUESTION 7

Which of the following statements about Huawei FusionCloud 6.x solution is incorrect?

- A. OpenStack in Region TypeII can contain multiple AZs. It could contain Multiple AZs with KVM and VRM. However, it only support one BMS AZ.
- B. Single-OpenStack architecture under Region TypeII.
- C. OpenStack control nodes under Region TypeII can be deployed on VMs.

D. Each AZ in the Region Typell can have only one virtualization type.

Correct Answer: C

QUESTION 8

ITIL best practices refer to the advanced ITSM methodology to understand enterprise requirements and implement sustainable management during IT service management.

Which of the following is the IT service operation process in the ITIL best practice system?

- A. Event management, incident management, problem management, request fulfillment, and access management
- B. Incident management, problem management, service desk, request fulfillment, and event management
- C. Incident management, service desk, request fulfillment, access management, and event management
- D. Event management, incident management, change management, and access management

Correct Answer: A

QUESTION 9

Which of the following statements about the logical structure of the Oracle database is correct?

- A. Tablespace is a collection of multiple segments
- B. An extent corresponds to a block
- C. A segment is a collection of multiple extents
- D. Block is the basic unit of I/O operations. The default value is 4 KB.

Correct Answer: C

QUESTION 10

Each step in the automatic deployment process is automated, which can bring significant benefits including efficiency. What are they key elements?

- A. Software development automation
- B. Script-based deployment
- C. Common deployment scripts
- D. Version control

Correct Answer: A

QUESTION 11

Which of the following statements about the open protocol of the NDMP for network backup is independent of the platform data storage?

- A. The NAS device that supports the NDMP protocol can directly communicate with the backup server without installing the backup software client on the NAS device.
- B. When the NDMP protocol is used, the backup software, NAS devices, backup media, and production servers must support the NDMP protocol.
- C. During the backup, the NAS device transfers files and directories related to the backup media to the backup server. The backup server prepares indexes for maintenance.
- D. Backup data can be read from NAS storage devices and backed up to backup media instead of production servers. This reduces the workload on production servers.

Correct Answer: A

QUESTION 12

In the Huawei FusionCloud solution, what are the relationships between the CCS and peripheral services?

- A. The CCS provides the computing capability service
- B. The DNS maps the CCS domain name to the CCS floating IP address
- C. ELK Collect CCS Logs
- D. EVS queries the volume type label in a specified AZ

Correct Answer: A

QUESTION 13

The Simpanat provide backup, archiving, replication, resource management and distributed search modules. Which of the following statements is incorrect?

- A. The distributed index technology improves the reliability and performance of the backup system
- B. Data classification indexes are used to classify data files to improve data backup and archiving efficiency
- C. Distributed index (also called 2-segment index) indicated that index information is managed by the management server (CommServe) and media server (MediaAgent).
- D. Level-1 indexes are managed and maintained by the media server

Correct Answer: C

QUESTION 14

In the cloud data center migration scenario, the Oracle database layer migration solution can be classified into physical migration and logical migration on data block change modes.

A. True

B. False

Correct Answer: B

QUESTION 15

Huawei HiCloud platform is designed based on the mainstream microservice architecture in the industry and supports fast iteration and elastic scaling.

A. True

B. False

Correct Answer: A
