QUESTION 1

What are two features provided by VMFS5? (Choose two.)

A. Support for greater than 2TB storage devices for only VMFS and Physical RDMs

B. Support for up to 32 extents

C. Support for greater than 2TB storage devices for VMFS, Physical and Virtual RDMs

D. Support for up to 64 extents

Correct Answer: BC

QUESTION 2

An administrator needs to add a new CA-signed SSL certificate to a vCloud Director cell. Which two tools could the administrator use? (Choose two.)

A. configure script

B. installation script

C. cell-management-tool

D. vCloud Director console

Correct Answer: AC

QUESTION 3

Which VMware Distributed Switch feature should be used to duplicate the network traffic of a port for troubleshooting purposes?

A. Promiscuous Mode

B. NetFlow

C. Port Mirroring

D. LACP

Correct Answer: C

QUESTION 4

An administrator logged in with the Enterprise Administrator role needs to create a Network Profile, but the option does not appear in the vCloud Automation Center interface. What should the administrator enable to resolve the issue?

A. Network Pools

B. the Static IP service

C. Network Proxy Agent

D. Network Distributed Execution Manager

Correct Answer: B

QUESTION 5

Which condition would prevent an administrator from unmounting a VMFS datastore?

A. The datastore is being managed by Storage DRS.

B. The datastore contains vCenter Server templates.

C. The datastore is mounted by multiple hosts.

D. The storage backing the datastore is detached.

Correct Answer: A

QUESTION 6

For security reasons, SSH and the ESXi Shell have been disabled on a standalone ESXi 5.x host. A

vSphere administrator accesses the Direct Console User Interface (DCUI) to examine log files related to a

recent connection issue.

Which system log can the administrator access to determine the cause of the issue?

A. syslog

B. fdm

C. messages

D. vmksummary

Correct Answer: A

QUESTION 7

During a physical network reconfiguration, an ESXi host briefly lost connection to the management network. High Availability (HA) began powering off the virtual machines residing on the affected host to be restarted on an unaffected host in the cluster. Which setting should the administrator configure to prevent this type of HA failover during planned maintenance?

A. Host isolation response

B. Host monitoring

C. VM monitoring

D. Admission control

Correct Answer: B

QUESTION 8

An administrator needs to add resources to the only Provider VDC in the company\\'s Private Cloud. Which method will require the least administrative effort?

A. Add another cluster.

B. Add a host to the cluster.

C. Create a Resource Pool in the cluster.

D. Merge with another Provider VDC.

Correct Answer: B

QUESTION 9

An administrator needs to create a network. A virtual machine must be deployed with the same IP and

MAC address multiple times.

Which network type should the administrator create?

A. External Network

B. vApp Network

C. Network Pool

D. Direct Organization Network

Correct Answer: B

QUESTION 10

An administrator needs to use vSphere Update Manager for the initial deployment of VMware Tools on a

group of newly created virtual machines. When the administrator scans the objects for compliance, a

compliance state of Incompatible is returned.

How should the administrator resolve the issue?

A. Install VMware Tools manually on the new virtual machines.

B. Ensure the latest version of VMware Tools has been downloaded to the Update Manager repository.

C. Enable the Upgrade VMware Tools on Power Cycle option.

D. Create a separate baseline object for each guest OS type .

Correct Answer: A

QUESTION 11

A vCloud Director Organization administrator needs to configure access for a user to a virtual machine.

The administrator must ensure the user cannot edit or change the virtual machine\\'s properties including

the power state.

Which pre-defined role would provide the most capabilities but still meet the stated requirements?

A. vApp User

B. Catalog Author

C. vApp Author

D. Console Access Only

Correct Answer: D

QUESTION 12

The vSphere administrator needs to migrate a virtual machine from one ESXi 5.5 host to another ESXi 5.5 host. The virtual machine has a virtual disk that is stored in local storage. Assuming only the vSphere Essentials licensing is in place, which technique should the administrator use to accomplish the migration?

A. vMotion migration

B. Cold migration

C. Enhanced vMotion migration

D. Storage vMotion migration

Correct Answer: B

QUESTION 13

A vCloud Director administrator needs to import an existing vApp in OVF format into MyCloud. What should the

administrator do to accomplish this goal?

A. Drag and drop the OVF from the desktop into MyCloud.

B. Deploy the OVF directly from a vSphere client into MyCloud.

C. Upload the OVF directly from local or shared storage into MyCloud.

D. Use the Datastore Browser to upload the OVF from a vSphere datastore into MyCloud.

Correct Answer: C

QUESTION 14

A vCloud Director system administrator needs to be notified when the total amount of storage reaches a

specific amount of utilization.

Which type of server must the system administrator configure for vCloud Director to send the notification?

A. an SNMP server

B. an SMTP server

C. a JMX server

D. a CIM server

Correct Answer: B

QUESTION 15

Which two tools should an administrator use to prepare and implement VXLAN? (Choose two.)

A. vShield Manager

B. vShield Endpoint

C. vSphere Web Client

D. vCloud Director

Correct Answer: AC
