QUESTION 1

An administrator is configuring a new device and receives the following error message:

Unable to determine robot type

What are two possible solutions? (Choose two.)

A. download a new device_mapping file from the Veritas Support website.

B. ensure the tape drive is closed and ready for use.

C. perform a rescan of the available tape drives.

D. verify compatibility for the library with NetBackup.

E. select the correct device type for the drives.

Correct Answer: AD

QUESTION 2

An administrator is preparing to perform disaster recovery for many clients whose backups are stored on multiplexed tapes.

Which host property should the administrator modify, prior to the restores, to ensure the best recovery time?

A. set "Enable unrestricted media sharing for all media servers".

B. increase \\'\\'Restore retries".

C. increase the "MPX_RESTORE_DELAY" setting on the master server.

D. add the client IP addresses to "Resilient Networks".

Correct Answer: B

QUESTION 3

After creating a NBU-Catalog type backup policy, an administrator receives the following message:

```
DR file is on the same partition as your catalog and will be
unusable in an actual disaster or disk failure.
```

Which two options are available to the administrator to ensure the DR file is available for future use? (Choose two.)

A. ensure the folder DR file is on a non-root volume.

B. ensure the DR file is created on a volume other than the NetBackup volume.

C. ensure the NetBackup catalog is on a non-root volume.

D. configure a valid email address of the administrator in the "Send email" option.

E. configure Auto Image Replication to send the DR file to a remote master server.

Correct Answer: BD

QUESTION 4

An administrator must recover an expired image from a tape where only one remaining copy exists and there are other unexpired images on the tape.

How should the administrator locate the tape which contains the image?

A. run the Tape Contents report

B. run the Images on Tape report

C. run the Tape Summary report

Correct Answer: A

QUESTION 5

Refer to the Exhibit.

An administrator is trying to access client properties on the NetBackup Administration Console and receives the following message:

When checking the services on the master server, the administrator sees that the PBX service is down.

Which two commands can the administrator use to increase the PBX log level to determine the reason for the message above? (Choose two.)

A. vxlogcfg

B. pbxcfg

C. vxpbx_exchanged

D. pbx_exchange

E. vxlogmgr

Correct Answer: AE

QUESTION 6

Which two media status destinations are excluded in the count against maximum number of partially full media? (Choose two.)

A. Imported

B. Active

C. MPX

D. Multi-Retlev

E. Frozen

Correct Answer: AE

QUESTION 7

The NetBackup Resource Broker (NBRB) maintains resource requests for jobs that are queued.

Which two criteria does NBRB use to evaluate the resource requests and provide resources to each job sequentially? (Choose two.)

A. job priority

B. retention level

C. time when NBRB receives the request

D. data classification rank ID

E. date of last successful backup

Correct Answer: AC

QUESTION 8

What is the purpose of the Logon and Password settings in the Disaster Recovery tab of a NetBackup catalog backup policy?

A. to specify credentials required to access a network share

B. to encrypt the NetBackup catalog backup data

C. to require credentials to perform a catalog recovery

D. to encrypt the disaster recovery file

Correct Answer: A

QUESTION 10

Which is not valid media state?

A. Suspended

B. Full

C. Empty

D. Frozen

Correct Answer: C

EMPTY is not a valid status.

QUESTION 11

What does media sharing mean in NetBackup?

A. More than one backup application can write data to a tape.

B. More than one media server can append to the same tape.

C. More than one master server has the same tape in its catalog.

D. Data from more than one client can be written to a tape.

Correct Answer: B

Media sharing must be enabled explicitly.

QUESTION 12

An administrator has a master server named master1. When the administrator runs the bpclntcmd -pn command on the client, the administrator receives the following output:

```
bpclntcmd -pn
expecting response from master2
client_01.domain.com client_01 192.168.0.30 3815
```

What is a possible cause for this output?

A. The host file needs to be changed on the master server.

B. The client has lost connectivity to the master server.

C. The SAN connection to the master server needs to be configured.

D. The bp.conf of the client needs to be updated.

Correct Answer: B

QUESTION 13

Which two actions should an administrator perform to ensure NetBackup will successfully erase a tape volume? (Choose two.)

A. ensure the volume is in the NetBackup Pool.

B. ensure the volume is unassigned.

C. ensure the volume has been deleted from inventory.

D. ensure the images for the volume have expired.

E. ensure the volume has been ejected from the library.

Correct Answer: BC

QUESTION 14

Where are the NetBackup track logs located by default when backing up a NetApp filer using the NDMP policy type with NetBackup Accelerator enabled?

A. on a NetBackup client

B. on the NetApp filer

C. on a user defined network share

D. on the NetBackup master and media server

Correct Answer: B
